SELECT COMMITTEE ON CONSUMER CREDIT

Hearings Held At Parliament Buildings,

Toronto, Ontario, 2nd Day of December, 1963

Digitized by the Internet Archive
in 2022 with funding from
University of Toronto

1 ---ON RESUMING AT 2:00 P.M., DECEMBER 2, 1963.

2 THE CHAIRMAN: Ladies and Gentlemen,
3 we will bring the meeting to order, as we now have a
4 quorum.

5 We have with us this afternoon Mr.
6 C. M. Cawker, President of the Canadian Consumer Loan
7 Association. I will ask Mr. Cawker to introduce the
8 gentlemen that he has with him and tell us who they
9 are before he proceeds with the brief which is quite
10 long, I understand, and which he is going to read to
11 us. Would you go ahead, Mr. Cawker and introduce
12 the gentlemen who are with you, please?

13 MR. CAWKER: Mr. Chairman, ladies and
14 gentlemen, my names is Charles M. Cawker, I live in
15 Belleville, Ontario and I'm President of the Canadian
16 Consumer Loan Association and my company affiliation
17 is Longbank Finance Limited. With me today I have
18 to my immediate right the Past President of the Canadian
19 Consumer Loan Association, and Vice-President and
20 General Manager of Beneficial Finance Company of Canada,
21 Mr. Edward J. Hendricks. And on his right Frederick
22 C. Oakes, Vice-President of, Executive Vice-President
23 of Longbank Finance and the Past President of the
24 Canadian Consumer Loan Association. And Mr. James H.
25 Jones, President and General Manager of Sovereign Finance.

26 Our brief, Mr. Chairman, is rather
27 lengthy, but due to the relationship over the years
28 with the Department of Insurance Federal and the
29 statistics which have been accumulated, not only by
30 that Department in its supervision of our industry but

1 also thanks to the statistical departments of some of
2 our members, we have tried to bring together in a brief
3 the pertinent information which we certainly hope might
4 be of help to this Committee. If it please the
5 Committee, I will read the brief.

6 THE CHAIRMAN: Proceed then, Mr. Cawker.

7 MR. CAWKER: "The Canadian Consumer
8 Loan Association is composed of small loans companies
9 and money lenders licensed to make loans to Canadian
10 consumers under the Small Loans Act. Subject to the
11 approval of its Board of Directors as to an applicant's
12 qualifications, all corporations, partnerships and
13 individuals licensed under this Act are eligible for
14 membership. The total outstandings under the Small
15 Loans Act on December 31, 1962, amounted to 1,055,356
16 loans for \$482,246,939 of which 99% was written by
17 members of this Association.

18 "The objectives of the Association
19 which was formed in 1944 are as follows:

20 (a) To improve the operating standards
21 of its members.

22 (b) To promote, encourage and maintain
23 policies calculated to cultivate public confidence in
24 the small loans business.

25 (c) To compile, make available and
26 disseminate information relating to the said business
27 for use of its members and the general public.

28 (d) To encourage its members to co-
29 operate with Better Business Bureaux, Chambers of
30 Commerce, Boards of Trade, Welfare Societies and other

1 agencies for the purpose of improving economic and
2 social conditions.

3 (e) To do all such other things as
4 are incidental or conducive to the attainment of the
5 above objects.

6 "The Code of Ethics of the Association
7 appears as Appendix A of this brief and the list of
8 members appears as Appendix B. Of course the figures
9 referred to in the first paragraph of this brief are
10 from the Interim Report of the Department of Insurance,
11 Small Loans Companies and Licensed Money Lenders for
12 the year ended December 31, 1962.

13 "The regulated consumer loan business
14 developed in response to an urgent social and economic
15 need for a cash loan service to families of modest
16 means. This need for satisfactory sources of small
17 loans to consumers has only developed in Canada during
18 comparatively recent years with the change from an
19 agrarian to an industrial economy and the consequent
20 shift of population from rural to urban areas. The
21 result has been the dependence of a growing number of
22 people on cash income rather than on the physical
23 products of their own hands. Early laws did not protect
24 borrowers and many people needing small loans were
25 victimized by unscrupulous lenders charging exorbitant
26 rates.

27 "This condition did not develop as
28 early in Canada as in the United States where intensive
29 studies of the problem commenced in 1908. Most active
30 in this field was the Russell Sage Foundation, a philan-

1 thropic body dedicated to the improvement of social and
2 living conditions. Studies by the Foundation showed
3 laws limiting interest on all loans, regardless of size,
4 were inadequate as far as small loans were concerned
5 since they only prevented small loans being made legally
6 and drove people into the hands of the unscrupulous
7 lenders. It also was apparent from experiments with the
8 operation of philanthropic lending agencies that the
9 need for small loans could not be met in this manner.
10 The Foundation concluded that the only answer was to
11 enact laws which would provide small loan rates low
12 enough to protect borrowers but high enough to attract
13 the commercial capital necessary to meet the public
14 need.

15 "The Foundation received the support
16 of ethical lenders, welfare organizations and far-
17 sighted business leaders. By 1917 the first laws
18 containing the provisions now known as the Uniform
19 Small Loan Law had been passed in the majority of
20 states.

21 "In Canada it was apparent by 1936
22 that a small loan law was necessary for here, as had
23 happened in the United States, the unscrupulous lenders
24 were creating serious social problems.

25 "Prior to 1940 when the Small Loans
26 Act became operative, there was no effective legislation
27 to protect small sum borrowers. The Money-Lenders Act
28 of 1906 limited to 12% per annum interest on all loans
29 of \$500 or less but did not prevent the making of
30 additional charges. The situation which existed is

described very clearly in the preamble to the Small
Loans Act:-

'Whereas it has become the common practice for money-lenders to make charges against borrowers claimed as discount, deduction from an advance, commission, brokerage, chattel mortgage and recording fees, fines and penalties, or for inquiries, defaults or renewals, which, in truth and substance are in whole or in part, compensation for the use of money loaned or for the acceptance of the risk of loss or are so mixed with such compensation as to be indistinguishable therefrom and are, in some cases, charges primarily payable by the lender but required by the lender to be paid by the borrowers; and whereas the result of these practices is to add to the cost of the loan without increasing the nominal rate of interest charged so that the provisions of the law relating to interest and usury have been rendered ineffective;'

'Thus there were no legal means of preventing lenders from making extra charges of various kinds with the result that borrowers, lacking the bargaining power usually present in commercial transactions, often found themselves saddled with unconscionable charges and repayment terms.

"A small group of ethical lenders who were operating under special private acts, did not condone such practices and made every effort to bring these conditions to the attention of responsible people to the

1 end that overall effective legislative action might
2 be taken. These efforts led eventually to a complete
3 examination of the subject by successive parliamentary
4 committees between 1936 and 1939. During these hearings
5 witnesses appeared representing social agencies in
6 Canada and the United States, banks, credit unions
7 and the responsible lenders.

8 "The final report resulting from these
9 various parliamentary studies was issued June 1, 1938
10 by the House of Commons Banking and Commerce Committee.
11 The emphasis this Committee placed on the importance of
12 setting as low a rate as possible is indicated by the
13 following statement which appeared in the Committee's
14 report:-

15 'Throughout its enquiry your Committee's objective
16 has been to secure the best procurable rate for the
17 borrower.'

18 'However the Committee was mindful of
19 the need for an adequate rate and this type of service
20 as indicated by this further statement:-

21 'Obviously the State can intervene advantageously
22 over rates only within a limited field; for
23 naturally a legislative rate at which money is not
24 obtainable is of doubtful benefit to necessitous
25 people. In the debates over the subject it would
26 almost seem to have been at times forgotten that to
27 legislate a maximum rate is an injunction that, if
28 people cannot borrow at the prescribed rate, they
29 cannot borrow at all.'

30 'The principal conclusions of the

1 Committee were:-

2 (1) There was a need for instalment loans to wage
3 earners and salaried people.

4 (2) The cost ratio of small consumer instalment loans
5 was considerably higher per dollar loaned than in the
6 case of commercial loans and therefore a higher rate
7 was necessary.

8 (3) Existing legislation did not provide the protection
9 that borrowers should have against excessively high rates.

10 "The Small Loans Act as passed in 1939
11 set the "cost of loan" at a maximum of 2% per month on
12 reducing balances. Such cost included all charges for
13 any loan of \$500 or less. The Act fulfilled its purpose
14 and licensed, supervised consumer loan service became
15 available across Canada.

16 "The Act also provides for licensing,
17 inspection of lenders' books and records, and annual
18 returns by lenders to the Superintendent of Insurance
19 for Canada. This is a most comprehensive return which
20 fully discloses all details of the operation as will be
21 seen by the copy of the Superintendent's Annual Report
22 for 1961 which is the latest available and appears as
23 Appendix C. In connection with licensing, Section 5(a)
24 of the Act states:-

25 'The Minister may issue a license to any person
26 upon being satisfied that the experience, character
27 and general fitness of such person, or if such a
28 person is a corporation, of the officers and
29 directors of the corporation, are such as to war-
30 rant the belief that the applicant will, if granted

1 a licence, carry on with efficiency, honesty and
2 fairness to borrowers the business of money lending
3 pursuant to this Act.'

4 "By 1956 when the Act had been in force
5 for sixteen years without revision, it became apparent
6 that with the post war growth of the economy there had
7 been a tremendous increase in the demand by consumers
8 for loans over \$500. This is evidenced by the fact that
9 at the end of 1956 out of a total of \$343 million in
10 loans outstanding with licensed consumer loan companies
11 and their affiliates, only \$88 million, or 26% represent-
12 ed loans up to \$500 and therefore under regulation.

13 After extensive study by the House of Commons Banking
14 and Commerce Committee, the Act was amended effective
15 January 1, 1957, to extend the area of regulation to
16 cover all loans up to \$1,500 under the following
17 conditions:-

18 (1) Maximum rates:

19 2% per month on any part of the unpaid principal
20 ~~balance not exceeding \$300,~~

21 1% per month on any part of the unpaid principal
22 balance exceeding \$300 but not exceeding \$1,000,

23 $\frac{1}{2}$ % per month on any remainder of the unpaid
24 principal balance exceeding \$1,000 but not exceed-
25 ing \$1,500.

26 No other charges whatsoever may be made under the
27 terms of the loan contracts.

28 (2) The cost of any loan or any part of it cannot be
29 compounded or deducted in advance.

30 (3) In the case of loans for \$500 or less made for more

1 than 20 months, and loans between \$500 and \$1,500 made
2 for more than 30 months, the rate must not exceed 1%
3 per month on unpaid principal balances. Similarly, if
4 part of any loan remains unpaid after the due date of
5 the final instalment shown in the contract, the rate
6 shall not exceed 1% per month on the unpaid balance.

7 (4) If more than one loan is made to one person or to
8 a husband and wife, the same rates apply as though one
9 loan for the same total amount was made.

10 (5) Loans shall be repayable in approximately equal
11 monthly instalments.

12 (6) The borrower may repay the loan or any part of it
13 on any instalment date, without notice, bonus or
14 penalty.

15 "It is interesting to compare rates
16 in the Canadian Small Loans Act with legal rates in
17 other countries. The schedule appearing as Appendix D
18 sets out the maximum legal rates under the various acts
19 of the state legislatures in the United States and it
20 can be seen from this the Canadian rates are lower in
21 every instance.

22 "In Great Britain the law is not as
23 positive as in Canada and the United States. The law
24 there sets no direct limit on the rate of interest a
25 money lender may charge. It does specify, however,
26 that if the rate is greater than 48% per annum, the
27 money lender must show, in any proceeding in respect
28 of money lent, why the Court should not consider the
29 rate excessive. Conversely, where the rate is less
30 than 48%, the borrower must show the Court why it should

1 consider the rate excessive.

2 "By the end of 1962, of the \$644
3 million reported by the Bank of Canada as outstanding on
4 the books of licensed consumer loan companies and their
5 affiliates, \$482 million, or 75%, represented loans of
6 up to \$1,500 and therefore under regulation. A copy
7 of the Act and an explanatory digest of it appear as
8 Appendices E and F.

9 "Each licensee is inspected annually
10 by Department of Insurance examiners. Complaints to
11 the Department about loans made under the Act by
12 licensed lenders have been rare. This is noteworthy
13 in the light of the more than one million loans made
14 annually. Members of the Canadian Consumer Loan
15 Association are continually alert to the possibility of
16 illegal lending activity which occasionally comes to
17 light in connection with unlicensed lenders. In these
18 cases the information is cleared through the Association
19 Headquarters and passed on to the Department of
20 Insurance for investigation and such other action as
21 the Superintendent may direct. This manifest desire
22 on the part of members of the Association to see the Act
23 achieve its purpose has undoubtedly had much to do with
24 the successful operation of the Act.

25 "The following table shows the
26 effective rates to the borrower resulting from the
27 rates set out in the Small Loans Act:-

28

29

30

TABLE 1

Amt. of Loan	Rates (Small Loans Act)	Rate/ Month	Rate/ Annum	Lenders' Gross Revenues/\$100 Loaned/Year
\$300	2%	2.00%	24.00%	\$13.46
\$500	2%-\$300 1%-\$301-\$500	*1.81%	21.72%	\$12.15
\$1,000	2%-\$300 1%-\$301-\$1,000	*1.47%	17.64%	\$ 9.87
\$1,500	2%-\$300 1%-\$301-\$1,000 $\frac{1}{2}$ %-\$1,000-\$1,500	*1.27%	15.24%	\$ 8.44

*Average rate when loan is paid according to contract.

And you will notice in Table 1 the rather wide swing in rates per annum from the 300 to 1500 and the lender's gross revenue on dollars earned per year. And it should be noted that the percentages marked with an asterisk are the average rate when the loan is paid according to contract.

"The last column, showing the lenders' gross revenue per \$100 of loan made per year, illustrates the point that in the case of instalment loans a rate of 24% per annum does not mean a cost of \$24.00 per \$100 of loan. This is a common mistake which is even sometimes made by otherwise well informed people and is attributable in part to the use of other methods of calculating charges by other financial agencies.

"Consumer instalment credit falls into two main divisions which are quite distinct but are often confused by many who comment on them in public discussion. These two divisions are:-

(1) Instalment sales financing.

(2) Instalment cash loans.

1 "Instalment sales financing enables
2 people to make purchases which they do not wish to or
3 are unable to make out of savings. The unpaid balance
4 of the purchase price is financed directly by retailers
5 or through sales finance companies. Ownership does not
6 pass to the purchaser until the final instalment is paid.
7 Sales finance companies which specialize in this service
8 to dealers rarely deal directly with the prospective
9 purchaser at the time of purchase.

10 "Consumer loan companies in extending
11 cash credit deal directly with the borrowers and are
12 fully responsible for investigation of their credit
13 standing as well as for the administration and collection
14 of the loans. Since the majority of loans are made
15 without liquid or readily saleable security, lenders
16 must regard character and paying ability as of prime
17 importance and therefore must ensure these factors are
18 accurately assessed.

19 "A substantial portion of cash personal
20 loans are made to enable families to reorganize their
21 financial affairs and help them to recover from
22 situations created by unexpected demands or interruption
23 of income. This permits families to work their way out
24 of debt at a pace suited to their earnings.

25 "In addition to consumer loan companies,
26 banks and credit unions make consumer loans. As consumer
27 credit has attained a more widespread acceptance and
28 the philosophy of saving for goods and services while
29 enjoying their use has become more generally accepted,
30 the banks have increased their activity in this field.

1 The Bank of Canada Statistical Summary for May, 1963,
2 reports that at December 31, 1962, the chartered banks
3 had \$1,183 million outstanding in consumer loans. This
4 is outlined in Table 2.

5 "The banks have a ready source of low
6 cost funds available and with existing branches
7 adequately staffed the costs of this additional service
8 can, to a considerable extent, be absorbed in their
9 general overhead. Despite these advantages their lower
10 rates of charge impose a limit upon the costs which a
11 bank can incur in investigating credit worthiness of
12 applicants and in servicing and collecting loans. Bank
13 management, aware of the cost limitations and of its
14 responsibilities to depositors, usually sets materially
15 higher credit standards in selecting risks than do
16 other types of consumer credit institutions.

17 "Credit unions in recent years have
18 experienced much the same growth rate as banks and
19 consumer loan companies and now have a considerable share
20 in the consumer loan total. By the end of 1961 there
21 were 4,700 credit unions in Canada with 2-3/4 million
22 members and assets totalling 1½ billion dollars. Of
23 these, 1,533 were located in Ontario with 581,000 members
24 and assets of \$270,000,000.

25 "Credit unions have definite limitations
26 in that their services are available only to their member-
27 ship which is usually restricted to a more or less homo-
28 geneous group of people with some common bond of interest.
29 They generally stress low rates of charge compared with
30 other types of institutions and they also stress

1 idealistic or moralistic motives of helpfulness to
2 fellow members. However, an individual who has access
3 to credit union services can, and frequently does, use
4 the services of a bank, a consumer loan company or other
5 lending institution, depending on his ability to meet
6 their credit standards or on the degree to which his
7 particular needs can be served by them.

8 "There are several reasons for credit
9 unions' ability to make loans at lower rates than con-
10 sumer loan companies not the least of which is their
11 complete exemption from income tax. In addition, they
12 are able to effect substantial operating economies through
13 voluntary unpaid workers, rent-free space (especially in
14 the case of industrial credit unions) less extensive
15 credit checking of loan applicants, lower collection
16 and payment processing expense (particularly where
17 payroll deductions are in force).

18 "Experience indicates the range in the
19 field of consumer loans is so wide as to borrowers'
20 character, capacity, stability and other factors which
21 constitute his credit stature, that it is unlikely
22 ever to be adequately or completely served by one type
23 of institution whether it be banks, credit unions or
24 consumer loan companies. While the banks have a larger
25 share than either credit unions or consumer loan
26 companies, these two between them comprise half the
27 consumer loan segment of the consumer credit field.

28 "The consumer loan companies are unique
29 in that they are the only source of consumer loans which
30 is available to many thousands of families who cannot or

1 do not wish to be members of credit unions or meet
2 bank requirements. A further difference is the fact
3 that they do not accept deposits but are dependent on
4 commercial capital to satisfy their borrowers'
5 requirements. They are also highly specialized in that
6 they concentrate on consumer loans.

7 "Consumer credit is generally regarded
8 as consisting of contractual obligations entered into by
9 consumers but not as house buyers for personal rather
10 than business reasons. As such, it includes indebted-
11 ness incurred in the form of charge accounts, commitments
12 to pay for goods and services in instalments and personal
13 borrowing without attendant collateral in the form of
14 stocks and bonds.

15 "The Bank of Canada does not produce
16 a single table showing all the elements of consumer
17 credit but the following table is consistent with the
18 above description and the figures composing it are
19 taken from Bank of Canada publications as indicated:-

Table 2, as you will see, breaks down the cash loan business under the headings of the three principle suppliers of this service and sales credit, commonly referred to as the acceptance business under the three main suppliers of this service.

The sources are the Bank of Canada Statistical Summary Finance Supplement, 1957 (1949 figures), and the Bank of Canada Statistical Summary, May, 1963 (1957 and 1962 figures).

The Notes -- I shall just go through

1 them quickly. I think they are fairly explanatory.

2 (1) Loans to individuals other than for business
3 purposes or home improvements and not fully secured
4 by marketable stocks and bonds.

5 (2) Loans made by companies licensed under the Small
6 Loans Act and affiliated companies usually repaid
7 in instalments.

8 (3) Not secured by mortgages.

9 (4) Charge account credit and instalment sale credit
10 combined.

11 (5) Latest available, December 31, 1961

12 "The year 1949 was selected because it
13 is the year chosen by the Dominion Bureau of Statistics
14 as its base year. The year 1957 was chosen because
15 it was in 1958 that the banks commenced a much more
16 concerted effort to develop business in the sales finance
17 and consumer loan fields by setting up special depart-
18 ments for this purpose.

19 "It can be seen from this table that
20 with only 15.3% of the total, consumer loan companies
21 do not comprise one of the major segments of consumer
22 credit. Banks with 28% of the total and retail dealers
23 and instalment sales finance companies with 24.7% and
24 18.3% respectively are the major participants. Never-
25 theless, with 1,055,000 loans of \$1,500 or less account-
26 ing for \$482,000,000. it can readily be understood that
27 the role of the consumer loan companies is of real
28 important to those families which use their service in
29 amounts averaging about \$450 each.

30 "In examining further the percentage

1 section of the table, several points stand out. The
2 banks' share of the total, which declined over 5% in the
3 eight years from 1949 to 1957, rose sharply by over 12%
4 in the four years ending December 31, 1962. Significant-
5 ly, the sales finance companies and retail dealers
6 decreased 11.2% and 6.5% respectively while the relative
7 growth of consumer loan companies and credit unions
8 remained at about the same level.

9 "The offices of modern consumer lenders
10 are set up to provide efficient service to customers in
11 locations which are readily accessible. Since privacy
12 is important to consumer borrowers, lenders provide
13 interviewing rooms for loan discussions in addition to
14 general office area.

15 "Although some loans are made to enable
16 the borrower to take advantage of a business opportunity
17 or to make an advantageous purchase, the majority of
18 prospective consumer loan customers come to the lender
19 because of some family financial problem. In these
20 circumstances it is important that the lender consider
21 the applicant's problem in detail and assist in every
22 way possible to find a solution. Thus the preliminary
23 interview in the lender's office usually encompasses
24 much more than simply filling in an application form.
25 In many cases intervention between the applicant and his
26 existing creditors and general financial counselling
27 occupy a considerable amount of the interviewer's time.

28 "After careful investigation most lenders
29 currently find only about 60% of applications actually
30 result in loans being made. It is not in the best

1 interests of the lender or the applicant to make a loan
2 when it appears the purpose of the loan is unsound or
3 that he is over-reaching his credit and may have
4 difficulty making repayment. The main considerations in
5 judging an applicant's eligibility to borrow are:-

6 (a) Character - This includes evidence of family accord
7 as well as the applicant's attitude toward his problem.
8 To obtain this knowledge sometimes requires confidential
9 checking with various sources.

10 (b) Earning Ability - This is determined by seeing pay-
11 cheques stubs or envelopes, T4 slips and commission
12 statements. The interviewer must be familiar with going
13 rates for various trade classifications in the area
14 and general employment conditions in the local industries.

15 (c) Stability of Employment - It is desirable that the
16 applicant has a good work record and indication of job
17 stability. Badge numbers and other evidence of employee
18 seniority may be seen.

19 (d) Other Sources of Income - This is checked by seeing
20 pension papers, direct checks with part-time or after-
21 hours employers, knowledge of going rates for rentals
22 of rooms, flats, etc.

23 (e) Existing Debt Commitments - These are mainly ascer-
24 tained in the office interview. Other sources include
25 credit bureaux, registry offices and lenders' exchanges.
26 Under the sponsorship of the Canadian Consumer Loan
27 Association, offices for the reporting and clearing of
28 loan information have been established in several major
29 areas and others are in process of formation. The
30 establishment of these exchanges demonstrates the desire

1 of lenders to exercise sound credit control.

2 (f) Paying Record - Interviewers ask to see payment
3 booklets on current instalment accounts, credit cards
4 and, sometimes, receipts for rent or mortgage payments.
5 These may also be checked through credit bureaux or by
6 direct contact with creditors.

7 (g) Essential Living Costs - These are determined through
8 consideration of such matters as number in the family,
9 location and type of housing, fuel expense, insurance,
10 operation of automobile and other fixed family expenses.

11 (h) Evidence of Family Cooperation - This is usually
12 determined by extent of mutual interest of husband and
13 wife in the purpose of the loan, contributions of em-
14 ployed children to family income, etc., It is sometimes
15 necessary to visit the applicant's home to view the home
16 surroundings at first hand to establish evidence of
17 family cooperation and character.

18 (i) Ownership of Security - This is established by check-
19 ing for instalment payment accounts, search of registry
20 office, direct contact with dealers and direct question-
21 ing during the interview.

22 "The transaction of a loan begins when
23 a complete stranger enters the office and requests a
24 loan. He is assigned to a private interview room where,
25 with the assistance of an interviewer, he completes an
26 application form on which he gives all the necessary
27 information. By analysing this information in conjunction
28 with the purpose for which the money is to be used, the
29 interviewer and the applicant are able to tentatively
30 arrive at the size of loan and monthly payment program

1 which will best accomplish the purpose and fit into the
2 applicant's ability to repay. The next step is to check
3 and verify the applicant's circumstances, paying habits,
4 indebtedness and income. When the investigation is
5 completed, lender and borrower finally determine the
6 amount of the loan and agree on the monthly payment plan
7 and the necessary documents are prepared. In most cases
8 lenders arrange for both husband and wife to be present
9 to receive the explanation of the loan and sign the
10 documents so that family cooperation is ensured.

11 "The need for detailed and careful super-
12 vision of a large number of payments is an inevitable
13 result of making many small-sum instalment loans.
14 Reminder notices, telephone calls, letters and, in some
15 cases, visits to the home are used to control delinquency.
16 Borrowers often encounter new emergencies which require
17 consultation with the lender and a complete review of
18 their circumstances. Sickness, accidents, temporary
19 lay-offs and strikes interrupt the normal receipt of
20 borrowers' incomes with the resulting need of arranging
21 new contract terms or rearranging existing payment plans.
22 The relatively good write-off record in the consumer loan
23 business is achieved by close attention to each indi-
24 vidual account.

25 "Because the total number of borrowers
26 on the books of consumer loan companies has shown an
27 increase for several years (see Table 3) some critics
28 have suggested that consumer borrowers remain almost
29 perpetually in debt to loan companies. While it is often
30 necessary for borrowers to obtain additional money before

the original loan is repaid, Table 4 shows that the criticism referred to has been exaggerated."

Table 3 gives us the small loan balances outstanding of small loan companies and licensed money lenders as of December 31 of the respective years. It is worth noting, of course, that the rather substantial change in the figures of the average loan balance occurred in the first year of the increase of the limit of the Small Loans Act from \$500 to \$1,500, which became effective January 1, 1957.

TABLE 3

SMALL LOAN BALANCES OUTSTANDING - SMALL LOAN COMPANIES & LICENSED MONEY LENDERS

Year	Number of Accounts	December 31	
		Total Loan Balances	Average Loan Balances
1951	442,959	\$60,259,902	\$136
1952	467,594	76,990,337	164
1953	482,976	81,840,415	169
1954	523,628	88,822,891	170
1955	529,704	88,844,506	168
1956	543,394	88,428,203	163
*1957	812,135	229,199,629	282
1958	892,111	315,827,669	354
1959	920,747	360,019,949	391
1960	957,965	391,548,554	409
1961	992,193	426,157,346	429
1962	1,055,356	482,246,939	456

* First year of increase of limit of Small Loans Act from \$500 to \$1,500.

Note: Data from Superintendent of Insurance Reports.

TABLE 4

Year	No. of Loans Outstanding 1st of Year	No. of Loans Made to New & Former Borrowers	Total Borrowers Dealt With	No. of Loans Outstanding Year End	No. of Loans Paid Off During Year	Percent Paid Off
*1957	543,394	505,750	1,049,144	812,135	237,009	23%
1958	812,135	493,848	1,305,983	892,111	413,872	31%
1959	892,111	376,473	1,268,584	920,747	347,837	27%
1960	920,747	369,110	1,289,857	957,965	331,892	25%
1961	957,965	398,027	1,355,992	992,169	363,923	27%

* First year of increase of limit of Small Loans Act from \$500 to \$1,500.

And, as referred to before, Table 4 shows the percentage of borrowers that completely pay off their loans in the given years as indicated by the Table. And once again 1957 represents the first year of the increase in the limit of the Small Loans Act from \$500 to \$1,500.

"The following tables, numbers 5 to 10, present a general picture of the people that use the services of consumer loan companies:-

Table 5 shows the loans made by small loan companies and money lenders in the year 1961.

TABLE 5

LOANS MADE BY SMALL LOANS COMPANIES AND MONEY LENDERS-1961

<u>Amount</u>	<u>Number</u>	<u>%</u>	<u>Amount</u>	<u>%</u>
\$100 and Less	41,493	3.6	\$ 2,939,079	0.6
101 to 200	172,607	14.7	25,597,483	4.3
201 to 300	174,029	12.3	42,821,010	7.1
301 to 400	142,850	12.3	49,149,562	7.6

601 to 700	79,785	6.8	51,288,313	8.5
701 to 800	80,454	6.8	60,007,710	10.0
801 to 900	59,545	5.1	50,583,878	8.4
901 to 1,000	198,462	17.0	197,064,123	32.4
1,001 to 1,100	10,990	0.9	11,470,919	2.0
1,101 to 1,200	5,139	0.4	5,955,877	1.0
1,201 to 1,300	3,653	0.3	4,561,581	0.8
1,301 to 1,400	2,626	0.2	3,528,804	0.6
1,401 to 1,500	<u>1,262</u>	<u>0.1</u>	<u>1,850,835</u>	<u>0.3</u>
	<u>1,169,699</u>	<u>100.0</u>	<u>605,687,740</u>	<u>100.0</u>

"Because the detailed information appearing in Tables 6 to 10 is not produced by all companies, these tables are based on an analysis of the figures of major consumer loan companies representing 65% of the total business under the Small Loans Act and show distribution of loans by occupation of borrower, purpose of loan, income and age of borrower, as well as the ratio of average loan size to average income."

Table 6 gives us the distribution of loans by principal purpose for the year 1960, taken actually from the individual figures kept by the companies and totalling 65% of the total business under the Act.

TABLE 6

DISTRIBUTION OF LOANS BY PRINCIPAL PURPOSE - 1960

<u>Reason for Borrowing</u>	<u>Percentage of Total Number of Loans Made</u>
Consolidation of Debts	31.69
Clothing	7.75
Fuel	1.46
Rent	.88
Medical Expenses	6.14
Automobile	11.08
Travel	11.03
Education	.41
Investment	.89
Household Repairs	5.26
Furniture	5.53
Taxes	3.13
Assisting Relatives	4.62

TABLE 5 (Continued)

Reason for Borrowing	Percentage of Total Number of Loans Made
Insurance Premiums	1.76
Moving Expenses	1.20
Mortgage & Interest	.81
Miscellaneous	<u>6.36</u>
TOTAL	100.00

Table 7 once again representing 65% of the total business under the Act, gives us the distribution of loans by occupation of borrower.

TABLE 7

DISTRIBUTION OF LOANS BY OCCUPATION OF BORROWER - 1960

Occupation	Percent of Total Number of Loans Made
Skilled - Semi-skilled	46.58
Unskilled	16.46
Service Workers	7.57
Sales Persons	3.36
Clerks & Kindred Workers	8.87
School Teachers	.63
Federal, Provincial, County, City	6.60
Managers, Officials, Proprietors	3.62
Professional	2.82
Farmers	1.91
Pensioned & Independent	1.47
Miscellaneous	<u>.11</u>
TOTAL	100.00

Table 8 is the distribution of loans

by borrowers' monthly income for the year 1960, giving us the percent of loans made by borrowers' monthly income as a percent of total loans.

TABLE 8

DISTRIBUTION OF LOANS BY BORROWERS' MONTHLY INCOME - 1960

Monthly Income	Percent of Loans Made by Borrowers' Monthly Income As Percent of Total Loans	
	<u>By Number</u>	<u>By Amount</u>
\$ 0 - \$100.00	.36	.14
100.01 - 200.00	7.69	3.75
200.01 - 300.00	26.33)	20.45
300.01 - 400.00	33.59) 78.74%	35.34
400.01 - 500.0	18.82)	22.66
500.01 - 1500.00	<u>13.21</u>	<u>17.66</u>
<u>TOTAL</u>	100.00	100.00

Table 9 is the distribution of loans by Age of the borrower. The percentage of loans made by age as a percent of total loans. And it is rather interesting to note the range of age where 71½% of the business originated. Table 8 show that nearly 79% of borrowers fall within a monthly income range of 200 to 500 dollars, while table 9 shows that nearly three-quarters fall within the age group of 20 to 44. This is to be expected. The majority of borrowers use the services of consumer loan companies mostly during their early adult years when family responsibilities are heaviest in relation to income.

TABLE 9

DISTRIBUTION OF LOANS BY AGE OF BORROWER - 1960

Age of Borrower	Percent of Loans Made by Age as Percent of Total Loans	
	<u>By Number</u>	<u>By Amount</u>
Less than 20	.72	.34
20 - 24	12.15	8.14
25 - 29	16.17	15.03
30 - 34	15.84	16.46
35 - 39	14.88	16.30
40 - 44	12.54	14.12
45 - 49	10.54	11.91
50 - 54	7.91	8.61
55 - 59	5.21	5.42
60 - 64	2.68	2.50
65 & Over	1.01	.73
Not Reported	<u>.35</u>	<u>.44</u>
<u>TOTAL</u>	<u>100.00</u>	<u>100.00</u>

Table 10 is the ratio of the average size loan to average monthly income by borrowers. This is again for the year 1960. Disregarding the low figure and the high figure we find that there is a rather interesting consistency from \$100 to \$500, in that there is $1\frac{1}{2}$ months' income involved in the total loan made through those categories.

Table 10 shows the close relationship between income and loan size. If the first and last classifications of \$100 or less and over \$500 are disregarded, it is apparent that there is very little

variation in the ratio of loan size to income in the remaining classifications. This tends to substantiate the contention that the majority of borrowers take a sensible approach to the use of credit and weigh their requirements carefully against their repayment capacity. It also points up the care exercised by lenders in assessing the credit worthiness of their customers.

TABLE 10

RATIO OF AVERAGE SIZE LOAN TO AVERAGE MONTHLY INCOME BY
BORROWERS - 1960

<u>Monthly Income</u>	<u>Ratio of Average Size Loan to Average Monthly Income</u>
\$ 0 - \$100.00	2.44
100.01 - 200.00	1.52
200.01 - 300.00	1.55
300.01 - 400.00	1.57
400.01 - 500.00	1.42
500.01 - 1500.00	<u>1.13</u>
<u>TOTAL</u>	<u>1.44</u>

"Foremost among the post war developments of new techniques to determine the credit capacity of prospective borrowers has been the organization of self-administered Lenders Exchanges under the sponsorship of the Canadian Consumer Loan Association. These exchanges create a pool of all the loans currently held by the participating members and provide a means whereby the members may ascertain by telephone whether or not a prospective applicant has an open loan with any other member company. The companies report loans made and loans paid off to the exchange daily so that the infor-

1 mation is as up-to-date as possible.

2 "The organization and operation of
3 Lenders Exchanges is time-consuming and expensive. Costs
4 must be assessed against member companies and an exchange
5 is only practical in centres having a sufficient number
6 of loan offices and open accounts to keep the cost
7 per clearance at a reasonable figure. For example, to
8 open the Toronto office, that is, the Toronto Lenders'
9 Exchange, involved outlays of over \$20,000 for capital
10 equipment plus an operating budget of approximately
11 \$3,000 per month. This exchange has over 200,000 names
12 on file and handles nearly 16,000 clearances per month,
13 from 209 loan offices in the area from Oshawa to Hamilton
14 and north to Richmond Hill and Newmarket.

15 "The first of these exchanges was
16 formed in Windsor, Ontario, in 1959, as a pilot project.
17 As experience in operation was gained, surveys were
18 made in other cities with the result that exchanges
19 were opened in Toronto in 1961, in Ottawa and Vancouver
20 in 1962, and in Montreal early in 1963. Discussions are
21 currently taking place which may result in formation
22 of exchanges in other Canadian cities in the future.

23 THE CHAIRMAN: Mr. Cawker, this may be
24 a good time for a five minute break.

25 MR. CAWKER: Very well.

26 ---SHORT RECESS.

27 THE CHAIRMAN: Gentlemen, if you will
28 resume your seats we will carry on. Will you kindly
29 close the door at the back, please? Would you carry on
30 then, Mr. Cawker, please.

1 MR. CAWKER: Thank you. Page 21,
2 Section 47, Delinquency.

3 "The Small Loans Act in Part 1, Section
4 6(1), requires 'Every loan shall be repayable in
5 approximately equal instalments of principal or of
6 principal and cost of the loan at intervals of not more
7 than one month each', and goes on to provide procedures
8 in case of default. This requirement imposes on lenders
9 and borrowers the need to agree on a due date for monthly
10 instalments within the limitations of length of contracts
11 which are also regulated by the Act.

12 "Monthly due dates thus become the most
13 important check points in regulating the progress of
14 the repayment of consumer loans. They are carefully
15 chosen after discussion between lender and borrower to
16 avoid conflict with other regular monthly obligations
17 and are prominently shown on documents signed by the
18 borrower and on the payment booklet given to the borrower
19 at the time the loan is made. Customer accounts are
20 filed by dates and all lenders employ a system whereby
21 these are examined daily so that overdue accounts may be
22 followed up according to the lender's delinquency control
23 policy.

24 "Lenders are well aware that it is in
25 their own interest to pursue a fair and reasonable
26 collection policy designed to maintain a high level of
27 collection efficiency while retaining the good will and
28 cooperation of borrowers.

29 "Evidence of collection policies may be
30 seen from Tables 11 and 12 which were compiled from

figures taken from the Annual Reports of the Superintendent of Insurance.

Table 11 shows, of course, the number of loans in various years made on chattels, the number of seizures of chattels, the number of seizures per 1,000 loans made, the number of offices in the industry membership and the number of seizures per office.

TABLE 11

Year	No. of Loans Made on Chattels	No. of Seizures of Chattels	No. of Seizures per 1,000 Loans Made	No. of Offices	No. of Seizures per Office
1957	713,616	944	1.3	836	1.12
1958	718,343	1,310	1.8	892	1.46
1959	698,565	1,388	1.9	979	1.41
1960	805,270	1,818	2.2	1,074	1.69
1961	836,764	1,880	2.2	1,211	1.55

Table 12, under the same heading shows the number of legal actions taken.

TABLE 12

Year	No. of Loans Made	No. of Legal Actions Taken	No. of Legal Actions per 1,000 Loans Made	No. of Offices	No. of Legal Actions per Branch
1957	1,075,322	1,610	1.4	836	1.92
1958	1,107,500	2,176	1.9	892	2.43
1959	1,097,226	2,270	2.0	979	2.31
1960	1,094,512	2,899	2.6	1,074	2.70
1961	1,169,699	3,424	2.9	1,211	2.82

"While the foregoing tables illustrate that lenders seldom resort to legal actions and seizures

1 to collect their accounts, Table 13 which follows,
2 shows that numbers of consumer loan borrowers do become
3 delinquent in varying degrees during the term of their
4 loan contracts."

5 If I might be permitted to digress just
6 for a moment from this brief. I have been employed in
7 this industry continuously since 1935 and I have been
8 a Director with the exception of the years 1940 to 1945.
9 I have been a Director of this Association for 14 years
10 and this is my fourth term during those years as
11 President of the Association. I have never ceased to
12 be very proud of the consistent record of the industry
13 under these two headings, the matter of seizures and
14 the matter of legal actions taken. I think probably it
15 is a tribute, first of all, to the good sense of
16 borrowers and secondly, to the good judgment exercised
17 by the lenders.

18 Table 13, of course, shows that we do
19 have delinquent accounts and the Table is related to
20 the number of small loans outstanding.

21

22

23

24

25

26

27

28

29

30

TABLE 13

DELINQUENT ACCOUNTS RELATED TO NUMBER OF SMALL LOANS OUTSTANDING - December 31

Year	Under 2 Months Arrears	% of Total Loans O/S	2 to 6 Months Arrears	% of Total Loans O/S	Over 6 Months Arrears	% of Total Loans O/S	Total No. in Arrears	% of Total Loans O/S
1957	128,105	15.7	44,214	5.4	24,556	3.1	196,875	24.2
1958	147,637	16.5	57,790	6.4	29,519	3.3	234,946	26.2
1959	155,006	16.8	65,613	7.1	36,565	3.9	257,184	27.8
1960	171,091	17.8	77,421	8.1	45,221	4.7	293,733	30.6
1961	92,613	9.3	80,383	8.1	52,954	5.3	225,950	22.7

Note 1:- O/S - Outstanding

Note 2:- Due to a change in the method of reporting, accounts delinquent less than one month are excluded from the 1961 figures.

"Most delinquency is caused by temporary interruption of borrowers' incomes due to lay-offs, strikes, etc., and is included in the totals despite the fact that some arrangement has been reached between lender and borrower to carry the account in arrears. A few cases give evidence of misrepresentation or fraud and these are the ones which require legal process to adjust.

"Some cases of delinquency are created by serious illness, family break-up or absconding debtors and become write-offs despite the lender's best efforts to prevent it. Some write-offs are voluntarily made by lenders when they become aware of personal misfortunes which would cause undue hardship to borrowers who continued to make payments despite their circumstances. Table 14 records write-offs in the industry related to average amounts of loans outstanding for the latest available five years.

TABLE 14

Year	Written Off Ledger Values	*Average Amount Outstanding	Net % of Write-Offs to Outstandings
1957	\$1,567,029	\$158,813,916	.9
1958	2,400,590	272,513,649	.8
1959	2,789,172	337,923,809	.8
1960	3,482,897	375,784,252	.9
1961	4,735,561	408,852,914	1.1

* Average of balances at beginning and end of year

Table 14 gives us, in the final analysis, the net percentage of write-offs to outstandings.

1 "The consistency apparent in the ratio
2 of write-offs to average outstandings since 1957 indicates
3 that consumer loan companies have maintained sound credit
4 standards and collection policies despite increasing
5 competition. It does, however, appear inevitable that
6 losses will increase as growth in the use of credit and
7 in the variety and number of credit plans and agencies
8 increases the complexity of credit investigation.

9 "Competition among consumer loan compan-
10 ies as well as from other kinds of lenders has increased
11 during the years since World War II because of increased
12 public demand for consumer credit service and the post
13 war growth of the economy.

14 "After the conclusion of World War II
15 veterans returned to civilian life with a consequently
16 high rate of new family formation which led to a boom in
17 house building and the need for furniture, appliances,
18 automobiles and other durables. Canadian industries
19 quickly converted from production of the needs of war
20 to the needs of peace. Production, employment and
21 spending reached record highs in an economy which inspired
22 confidence in the ability of the average family to buy
23 today and pay tomorrow.

24 "Consumer lenders expanded in numbers
25 and size as the economy expanded and established branches
26 in many areas whose residents had theretofore been forced
27 to commute to larger adjacent cities to obtain cash
28 credit. Table 15 shows the growth in the number of
29 licensees and number of branch offices for the period
30 1957 to 1961 to illustrate the growth within the consumer

loan industry itself. Table 16 shows the growth of this industry in relation to competition from other kinds of lenders to the extent that figures are available.

Table 15, of course, indicates the coverage by outlet and commences with the first year of the increase in the limit of the Small Loans Act from \$500 to \$1,500.

TABLE 15

<u>Year</u>	<u>Number of Licensees</u>		<u>Number of Offices</u>	
	<u>Canada</u>	<u>Ontario</u>	<u>Canada</u>	<u>Ontario</u>

1961	1,211	564	4,682	1,533	5,254	1,870

1 "Table 3 (page 1877) demonstrates that
2 the outstandings of the consumer loan industry have shown
3 a steady increase despite the marked growth in the number
4 of outlets of competitive services. This is strong
5 evidence that the industry offers lending service suited
6 to the needs of a substantial proportion of the Canadian
7 public. Since consumer loan companies cannot match the
8 rates offered by their principal competitors it must be
9 concluded that their service, their collection practices
10 and their credit qualification standards are such as to
11 attract borrowers whether they are eligible to borrow
12 from other lenders or not.

13 "Many consumers set significant values
14 upon convenience and continuing relationships with those
15 in whom they have confidence and also the environment in
16 which they do business. In general they tend to seek out
17 the lender whose eligibility requirement they can meet.

18 PERSONNEL OF OUR COMPANIES

19 "The companies which make up the
20 membership of the Canadian Consumer Loan Association
21 employ 2,670 male and 2,049 female employees. The annual
22 payroll for the industry in 1960 was \$17,481,285. In
23 addition to salary, most companies contribute towards
24 the cost of major medical expenses, group life insurance
25 and pension plans. The largest company in the business
26 reports its average hiring age for male employees is 22
27 years - it takes the average man about five years to
28 achieve manager status. Throughout their training period
29 employees' progress is regularly reviewed by supervisors.
30 After assignment to the first branch as manager, the line

1 of promotion continues through larger and more complex
2 branch offices to supervisory and executive levels.

3 "Many of the companies employ district
4 supervisors who have graduated from the rank of branch
5 manager. Supervisors visit the branches frequently to
6 ensure that sound lending procedures and fair collection
7 practices are adhered to. Their experience is invaluable
8 in the continuous training program which is an integral
9 part of branch office routine procedure.

10 "Individual companies and the Association
11 as a whole have spent many thousands of dollars develop-
12 ing motion pictures, manuals, and other training media
13 to ensure that their personnel will be fully instructed
14 in all phases of the business.

15 DISCLOSURE OF THE COST OF CREDIT

16 "The Canadian Consumer Loan Association
17 believes that consumers are entitled to a clear statement
18 of the cost of credit transactions. Members of the
19 C.C.L.A. show in their notes the rates in terms of
20 percent per month as set out in the Small Loans Act. The
21 Canada Interest Act requires that whenever any interest
22 is expressed in a written contract as a rate for any
23 period less than a year, then the yearly rate must also
24 be expressed. The rates are also, therefore, shown as
25 rates per annum to comply with the Interest Act and in
26 many cases appear in type larger than that used in the
27 body of the note.

28 "The rates are stated in the following
29 manner: -

30 2% per month (24% per annum payable monthly) on any

1 part of the unpaid principal balance not exceeding
2 \$300;

3 If I may draw to the attention of the
4 Committee, Mr. Chairman, we have a very glaring typo-
5 graphical error in this sentence that I have just read
6 in the brief appears as "in any part of the unpaid
7 principal balance exceeding \$300" and it should read,
8 "balance not exceeding \$300".

9 1% per month (12% per annum payable monthly) on any
10 part thereof exceeding \$300 and not exceeding \$1,000;
11 $\frac{1}{2}$ % per month (6% per annum payable monthly) on any
12 remainder thereof.

13 After last payment falls due:-

14 1% per month (12% per annum payable monthly) on
15 entire unpaid principal balance until fully paid.

16 Mr. Chairman, I have several sets of,
17 I think, fairly representative notes that are used in our
18 industry, which supports, I think, what we have just said
19 about statement of rate. Mr. Oakes, would you care to
20 take those to the Secretary. I hope you may find them
21 useful.

22 "In addition to this the note shows the
23 number and amount of the monthly payments as well as the
24 amount of the loan and since there are no bonuses or other
25 charges of any kind, the borrower can easily determine
26 the cost of the loan in dollars and cents.

27 "Because of this requirement of the
28 Interest Act and the manner in which the cost of the loan
29 is already being disclosed to the borrower, it is obvious
30 that any additional disclosure requirements applied to

1 licensees would be redundant. The Association submits,
2 therefore, that loans made under the Small Loans Act be
3 excluded from any legislation requiring disclosure of
4 cost of credit transactions.

5 "Experience of Association members in
6 dealing with hundreds of thousands of borrowers clearly
7 shows that it is the cost of the loan in dollars which
8 is most important to borrowers. The two questions which
9 borrowers most often ask are, "How much is the monthly
10 payment?" and "What will the loan cost altogether?"
11 Thus, speaking from the vantage point of lenders who
12 already provide disclosure of the cost of credit in both
13 of the ways which have been publicly suggested, there
14 is no doubt in the minds of members of this Association
15 that the expression of the cost in dollars is more
16 important and useful to most borrowers.

17 "The final point we wish to emphasize
18 is that in the preparation of any legislation requiring
19 disclosure of credit costs that all credit grantors
20 dealing with the public and not already required to
21 disclose their costs should be included."

22 I am not going to suggest that I read
23 all the Appendices, Mr. Chairman. I think, however, I
24 would like to read, for the record, the Code of Ethics
25 and Business Standards of the Canadian Consumer Loan
26 Association.

27
28
29
30

APPENDIX A

CANADIAN CONSUMER LOAN ASSOCIATION CODE OF ETHICS

AND BUSINESS STANDARDS

- (a) Members will explain fully to customers the actual cost, terms and contractual obligations of loan transactions.
- (b) Members will use in all loan transactions written instructions worded in as simple, lucid, and unambiguous language as circumstances will permit and will draw such instruments with a view to the bona fide application of these standards of business conduct.

It is possibly worth noting here that it has become a practice and, I think, in fact, is a requirement of the Superintendent of Insurance that any new company applying for a licence submits their documents or their proposed documents to the Superintendent of Insurance and I think it is also fair to say it has become traditional within our membership that if any member changes his documentation for any reason, even if it only be a change of name, the documents, as amended, are submitted to the Superintendent.

- (c) No Member shall take any note, promise to pay, or security that does not accurately disclose the actual amount of the loan, the time for which it is made and the agreed rate of charge, nor any instrument in which blanks are left to be filled in after execution.
- (d) Every Member shall, if so requested by the borrower, deliver to the borrower at the time any loan is made,

- 1 an exact copy of any note, loan contract, chattel
2 mortgage, lien agreement or wage assignment, signed
3 by the borrower.
- 4 (e) Every Member shall give to the borrower on demand
5 a plain and complete receipt for all payments made,
6 specifying the amount applied to loan charges and
7 the amount, if any, applied to principal, and
8 stating the unpaid principal balance, if any, of
9 such loan.
- 10 (f) Upon payment by a borrower of his indebtedness in
11 full, every Member shall mark indelibly such evi-
12 dence of indebtedness signed by the borrower with
13 the word "Paid" or "Cancelled", restore any pledge,
14 return any notice or loan contract or assignment
15 given to the Member by the borrower and upon request
16 release any mortgage.
- 17 (g) Every Member shall display in each place of business
18 a full and accurate schedule of the charges to be
19 made and the method of computing same.
- 20 (h) Members will endeavour to transact all business in
21 such manner as to merit the respect and confidence
22 of customers and the public.
- 23 (i) Members will avoid unduly harsh or oppressive
24 collection methods and, except in very special cases,
25 will resort to legal process for collection only in
26 the event of misrepresentation, fraud, or refusal
27 to comply with the terms of the contract.
- 28 (j) Members will adhere to the generally accepted
29 standards of business deportment in competitive
30 relations, in advertising, and in their dealings

1 with the public.

2 (k) The Members agree to take advantage of opportunities
3 to explain the Small Loans business frankly and
4 fearlessly to the general public, businessmen, public
5 officials, the press, legislators and others who
6 create public opinion.

7 Appendix B is a list of the members
8 of our Association and the number of branch offices
9 across the country as of June, 1963.

10 Appendix D is a breakdown of the dollar
11 charges on different size loans paid according to
12 contract, and this is based on 12 months, at lawful
13 maximum rates of charge under 44 small loan laws and
14 arranged by the loan size ceiling which very quickly
15 demonstrates the fact that under the Small Loans Act,
16 Canadians do enjoy the lowest rate in North America,
17 where there is a legislated small loans rate and, in
18 fact, in the world where there is any legislation
19 governing small loans.

20 Appendix F is a digest of the Small
21 Loans Act, and of course C and E are the copies of
22 the report of the Superintendent of Insurance for the
23 last year for which this report is available and a
24 digest or, as it is called, Office Consolidation, of
25 the Small Loans Act.

26 Mr. Chairman, I thank you and members
27 of the Committee very much for your patience in bearing
28 with me through this rather long brief today.

29 THE CHAIRMAN: Well, we appreciate
30 very much your appearing before us and the work that you

DIGEST OF SMALL LOANS ACT

This digest is intended to give the reader a working knowledge of the Act by explaining its composition and by converting the language of its principal provisions into simpler terms. The numbers used in this digest are those of the relative sections of the Act. Where reference is to sections from both Part I and Part II of the Act both section numbers are shown.

PURPOSE

The purpose of the Act is to limit the charges paid by borrowers of small loans and eliminate the practice of many lenders prior to 1940 of making various charges in addition to the stated interest rate.

Title - An Act respecting Small Loans

- | | | | |
|----|---------------------------|---|-----------------|
| 1. | Short Title | - | Small Loans Act |
| | Enacted | - | May 2, 1939 |
| | Came into force | - | January 1, 1940 |
| | Amended | - | August 14, 1956 |
| | Amendment came into force | - | January 1, 1957 |

The Superintendent of Insurance is responsible for the administration of the Act.

The Office Consolidation of the Act, combines the original Act and the amendment passed in 1956. The first portion of the Act is interpretive and defines the following terms:-

2. (a) "Cost" of a loan means the whole of the cost of the loan to the borrower whether it is called interest or anything else.
- (c) "Loan" means a loan made by a moneylender or small loans company of not more than \$1,500.
- (e) "Moneylender" means any person other than a chartered bank or registered pawnbroker who carries on the business of money lending, or advertises himself, or holds himself out in any way, as carrying on that business.

Note: Included are those companies incorporated under provincial legislation such as Niagara Finance and Trans Canada Credit.

- (f) "Small Loans Company" means a company incorporated by special Act of Parliament and authorized to lend money on promissory notes or other personal security and on chattel mortgages.

Note: There are five Small Loans Companies in operation at present - Household, Beneficial, Community, Canadian Acceptance and Laurentide.

The remainder of the Act is divided into three parts.

Part I covers only the operation of moneylenders.

Part II covers only the operation of Small Loans Companies.

Part III covers both moneylenders and Small Loans Companies and deals with penalties for contravention of the Act and issuance of regulations under the Act.

As far as practical operations are concerned the effects of Parts I and II are identical. The difference between the two parts is that in Part II the Loan Companies Act is made applicable to Small Loans Companies except for certain provisions which do not relate to their

business. This obviates the necessity for prescribing in the Small Loans Act the method of incorporation, duties and powers of the directors, etc., which are all set out in the Loan Companies Act.

- 13 (1) Sections 5, 7, 8, 10 and 11 in Part I are made applicable to Small Loans Companies.

Note: These sections refer to licensing, and inspection by the Superintendent of Insurance and other miscellaneous subjects.

PRINCIPAL PROVISIONS

<u>Rate</u>	The cost of any loan shall not exceed:
3 (2)	2% per month on any part of the balance up to \$300.
14 (2)	1% per month on any part of the balance over \$300 up to \$1,000.
	$\frac{1}{2}$ % per month on any part of the balance over \$1,000 up to \$1,500.
<u>Maturity</u>	If a loan of \$500 or less is made for more than 20 months maturity the maximum rate is 1% per month on the unpaid balance.
3 (3)	If a loan of between \$500 and \$1,500 is made for more than 30 months
14 (3)	the maximum rate is 1% per month on the unpaid balance.
<u>Repayment</u>	Loans shall be repayable in approximately equal instalments of principal or of principal and cost of loan at intervals of not more than one month.
6 (1)	
14 (5)(a)	
6 (2)	The cost of any loan or any part of it shall not be compounded or
14 (5)(b)	deducted in advance.
6 (3)	The borrower may repay any loan or any part of it before maturity on
14 (5)(c)	any instalment date without notice, bonus or penalty.
<u>Default</u>	If any loan remains unpaid after the due date of the final instalment, as shown in the contract, interest shall be charged at not more than
6 (1)	1% per month on the unpaid balance.
14 (5)(a)	
<u>More than one loan</u>	Where a borrower has an unpaid loan balance and the same lender makes a further loan to the borrower or the borrower's husband or wife the cost of the two loans shall not exceed the cost of a single loan for the same total amount.
3 (4)	
14 (4)	

Example 1: Total amount \$1,500 or less

Balance of original loan	\$700
New loan	800
<u>Total</u>	<u>\$1,500</u>

The cost shall not exceed
 2% per month on the first \$300 or any part of it
 1% per month on the next \$700 or any part of it
 $\frac{1}{2}$ % per month on the next \$500 or any part of it

Example 2: Total amount over \$1,500

Balance of original loan	\$800
New loan	900
<u>Total</u>	<u>\$1,700</u>

The cost shall not exceed
 2% per month on the first \$300 or any part of it
 1% per month on the next \$700 or any part of it
 $\frac{1}{2}$ % per month on the next \$700 or any part of it

Licenses

A moneylender, the cost of whole loans does not exceed 1% per month on the unpaid balance is not required to obtain a license.

5 (1) Any other person making loans of \$1,500 or less is required to obtain a license from the Minister of Finance.

5 (2) The Minister of Finance may issue a license to any person upon being satisfied that the experience, character and general fitness of such person indicate that he will conduct his business with efficiency, honesty and fairness to the borrowers and to the business of money-lending under the Act.

5 (4) The license expires on March 31 each year but may be renewed from year to year subject to the requirements of experience, character and fitness as set out in the Act.

Inspection

Licensees are required to make annual returns to the Superintendent of Insurance and to make their books available for inspection by him or his representatives.

7

9 The Superintendent of Insurance may also examine the books of any unlicensed lender in order to ascertain whether the Act is being observed.

1 have done in preparing this brief. I'm sure it will
2 be very helpful to the Committee.

3 MR. IRWIN: Mr. Cawker, I have four
4 questions. On page 7, Table 1, in the right hand
5 column you have a heading "Lenders' Gross Revenue per
6 \$100 Loaned per Year", \$13.46 opposite \$300 as the
7 amount of loan. Then in the next paragraph you make
8 a reference to the common misunderstanding. I just
9 wondered why you made this point. I gather that the
10 \$13.46 per \$100 of loan per year means that you are
11 actually making less than the 24% charge?

12 MR. CAWKER: Would you like to deal
13 with that, Mr. Oakes?

14 MR. OAKES: No, Mr. Irwin, the popular
15 misconception that we refer to is that 24% per annum is
16 \$24.00 per \$100 per annum. I was reading a publication
17 just the other day, from a very large credit union in
18 the United States. In fact it is the Washington Teachers
19 Credit Union, in which they are discussing rates charged
20 by the Credit Union down there. And they talk about the
21 various types of interest, add-on and discount that
22 you may find generally in the consumer finance field
23 or the instalment field and they say, "To clarify the
24 matter we often state \$6.50 per year per \$100 borrowed,
25 so that the borrower knows exactly what he is paying",
26 that is in the terms of dollars and cents, you see.

27 MR. IRWIN: But your actual rate of
28 return on the \$13.46 per \$100 loan would actually be
29 24%

30 MR. OAKES: Yes, sir.

1 MR. IRWIN: You have no objection
2 to the fact that you are required to make the disclosure
3 in a rate percent per annum?

4 MR. OAKES: We have no objection as
5 shown in our contracts. We have shown this but we do
6 appreciate the difficulty in other types of consumer
7 credit in translating the dollar cost or in having both
8 the percent per annum and the dollar cost included.
9 We find invariably with the public and speaking from
10 practical experience, that the customers want to know
11 how much in dollars. They can become so confused by
12 add-ons, discounts, simple percent per month, percent
13 per annum that in the final analysis they want how many
14 dollars it will cost them for the transaction.

15 MR. IRWIN: Well, insofar as this seems
16 to be our main pursuit to secure opinions on this
17 problem of stating a cost of a loan in terms of percent
18 per annum, I would have to concede if people were shopping
19 with your company and other lending institutions where
20 those others are quoting (next few words inaudible).
21 But in a case where they are dealing with one of your
22 companies as opposed to another of your companies and
23 both those companies are required to state the percent
24 per annum, do you not think that is meaningful to the
25 shopper for credit?

26 MR. OAKES: Well, I am in the small
27 loans field, sir. I am much more in favour of a
28 controlled rate be set by a public body rather than to
29 have a multitude of rates at which people may shop with
30 no control on the maximum rate for credit. I think it

1907

1 is important that the maximum rate tends to become the
2 rate throughout the industry and regardless which
3 licensed company they use the rate is the same.

4 MR. IRWIN: You are satisfied then
5 that the imposition by law of the requirement that you
6 state the rate as a percent per annum is no hardship?

7 MR. OAKES: Right, sir.

8 MR. IRWIN: Do you see any reason
9 why that would not be valid in other situations?

10 MR. OAKES: Well because there are
11 a multitude of different situations, particularly in
12 the sales finance field, for instance, which again is
13 a very large segment of consumer credit, where you may
14 have varying rates under the terms of the Small Loans
15 Act. We are all using the standard method but in
16 comparison between our particular industry and other
17 industries there is some confusion. But we do appreciate
18 the problems in other industries where you would need
19 a multitude of charts, for instance, depending on the
20 time, the amount and the periods of actual requirements.

21 MR. IRWIN: Well, the unique feature
22 of your type of game is that the form of contract is
23 standardized and therefore it is possible to standardize
24 the rate of interest, is that right?

25 MR. OAKES: It is unique within the
26 licensed companies, sir.

27 MR. CAWKER: I think it would be fair
28 to say, Mr. Irwin, however, that when we are talking
29 about loans lent since 1939, we have had complete
30 disclosure and therefore I think it follows that we are

1908

1 satisfied with it, we think the public are satisfied
2 with it. I would hesitate to take on the job of even
3 after 20 odd years in this business, of translating
4 possibly a revolving credit situation in a department
5 store, some types of sales finance, into percent per
6 annum. We are simply saying to you that as a result
7 of the years of exposure to what the borrower wants,
8 we are glad to disclose the percent per annum, but we
9 still feel that the most meaningful yardstick to him,
10 most meaningful statement of rate, is in dollars, his
11 dollar cost.

12 MR. WHITE: While we are on that
13 point, Mr. Chairman, I think the members of the Committee
14 will acknowledge that the dollar cost is apparently more
15 meaningful until such time as shoppers are given the
16 opportunity of knowing the industry and being able to
17 compare. It was suggested by the Canadian Consumers
18 Association that we ought to go beyond that a step and
19 add to the public school system what interest means. I
20 don't think anybody would challenge the fact that the
21 dollar cost is what they want to know now because there
22 is no opportunity for knowing and comparing interest
23 charges. But that doesn't prove anything.

24 MR. OAKES: I shouldn't make any
25 comment on the public school system, Mr. White, but
26 the more you try to explain to a customer in terms of
27 percent per annum, they say, "Yes, but how much is that
28 in cash?"

29 MR. IRWIN: I'm aware of that. That's
30 right now because that is the way the system works. That

1 doesn't prove that's the way the system should work.

2 MR. MacDONALD: Mr. Chairman, on this
3 same point, may I explore the implication, what I under-
4 stand to be the representation. You don't object to
5 a disclosure of interest because you are, in fact, now
6 doing it, but you say that it should be applicable to
7 everybody in the field?

8 MR. CAWKER: I said I believe, Mr.
9 MacDonald, in the -- as far as loans are concerned,
10 whether they be loans in our area, in the regulated
11 area, I think in any loan it is a fairly simple matter
12 to express in percent per annum, as we have done. I am
13 simply saying that I am not sure it's as easy to do this
14 in other types of consumer credit which I really don't
15 feel prepared to comment on.

16 MR. MacDONALD: What is the implication
17 of your statement then? Because you think it is
18 difficult to express it in some area, therefore it
19 shouldn't be expressed by everybody? That there
20 shouldn't be a law obligating the expression of interest?

21 MR. CAWKER: No, I'm not. I really
22 wouldn't say that I think there should not be a law, no.
23 I'm simply saying from exposure to the public and
24 finding what people who come into our offices ask us,
25 that they are more able to interpret dollar costs.

26 MR. IRWIN: Mr. Chairman and Mr.
27 MacDonald, could I interrupt? I was trying to establish
28 the premise myself. If I were to state it this way: If
29 in other situations that are not covered by the Small
30 Loans Act, the type of lending situation could be

1 standardized some way, then it would be possible to
2 apply the same type of regulations requiring a declaration
3 of the percent rate per annum as in your case. I
4 thought I gathered from your testimony that because
5 your situation was standardized in respect to the type
6 of lending situation, it is no great problem to state
7 the percent per annum, is that right?

8 MR. CASEKER: Mr. Hendrie, your
9 Company is across Canada, would you care to comment on
10 that?

11 MR. HENDRIE: Well, I think we have
12 to distinguish first between cash lending, you are
13 loaning cash directly to an individual and other types
14 of credit, consumer credit transactions. If we are
15 dealing only with cash lending and that would take into
16 consideration not only the small loan industry but the
17 consumer cash lending by banks and credit unions and
18 others who are engaged in the field. Now I presume
19 that it would be possible to establish a standard
20 expression of the interest as a percent per annum
21 covering all types of cash lending. But I think we
22 must also understand that we have in the consumer credit
23 field a great many other types of consumer credit. We
24 have, as we heard in this brief, sales finance credit.
25 We have, as we heard in this brief, retail and instalment
26 credit. We have charge accounts and we have oil company
27 accounts and all that sort of thing. If you are trying
28 to think in terms of expressing something that would be
29 clear and you wanted a common denominator for all types
30 of consumer credit, we say that that would have to be

1 expressed in terms of dollars because it is not possible
2 to make a percentage in percent per annum embracing
3 all types of consumer credit. If the legislation was
4 so enacted that would require that, then I can assure
5 the Committee that the cost of doing business for many
6 types of businesses would be immeasurably increased to
7 the detriment of the individuals who are attempting
8 to use credit. And that cost would be passed on in some
9 other form, either in a higher markup price or in the
10 curtailment of services. We think then that the dollar
11 cost expression is the clearest expression for a
12 comparative shopper as far as individuals are concerned.
13 And what both Mr. Cawker and Mr. Oakes were saying
14 from their personal experience and I can bear it out
15 also, you originally raised the question why do we put
16 emphasis on the fact that there is confusion on 24% per
17 year being equivalent to \$24.00 per annum. We did that
18 because this is a widespread misconception which we face
19 almost every day in our ordinary transactions despite
20 the fact that we have disclosed our interest and our
21 costs. And all people want to know is, "Does this cost
22 me \$24.00 for \$100 or what does it cost me?" And we
23 say, "No, it costs you \$13.46 for the \$100, if you pay
24 the obligation promptly". Now if you take the same
25 thing and a person went down to Eatons, for example,
26 and they bought \$100 worth of furniture and you were
27 trying to express the credit in a percent per annum
28 rate as far as Eatons was concerned, I don't think it
29 would have any meaningful purpose whatsoever, because
30 there would be so many variables in relation to that cost

1 that it wouldn't assist the individual that is shopping.
2 That is, as I believe from my reading of the subject
3 and the wide discussion that is going on not only in
4 front of this Committee but the Nova Scotia Committee
5 and various committees in the States, committees in
6 Congress, listening to the Douglas Bill, and so on,
7 somebody is -- we are trying to give a standard or a
8 measurer that will become a fixed thing that everybody
9 can use as a gauge. And for some reason the seizing
10 upon the percent per annum rate as the measure of
11 something, like the metric system or something else,
12 is automatically going to insure that the customer will
13 be able to shop for credit. I can assure you it will not
14 work in transactions, in my opinion anyway, in transactions
15 other than cash lending. In cash lending I think it
16 probably will.

17 MR. IRWIN: Mr. Chairman, the reason
18 I asked the question is that I thought I had it clear
19 in my mind until you brought up your table where you
20 said that the cost of \$100 is \$13.46 --

21 MR. OAKES: That's per \$100 per loan.

22 MR. IRWIN: I realize that. That's
23 right, but it's only \$50, in fact, you loan -- 54.

24 MR. OAKES: The customer receives \$100
25 in cash at the time of the transaction is completed, Mr.
26 Irwin. You are speaking of the average balance.

27 MR. IRWIN: This is where the confusion
28 arises in the mind of the public and in my mind. You
29 tell me it is 24% per annum and this I understand. Then
30

1 you tell me it is only \$13.46 for the lenders, and actually
2 it is. It's \$13.46 to borrow \$54. This is why, Mr.
3 Hendrie, in my view, you have got to find or should try
4 to find some other standard of expression. It seems to
5 me that the thing you said in the first place is that
6 you liked the idea of declaring it as a percent per
7 annum, is correct. (Next sentence inaudible)

8 MR. OAKES: Mr. Irwin, in discussing
9 with a broad spectrum of the public, I find usually
10 this question of percent per annum comes up among the,
11 say, professional people, maybe lawyers and accountants.
12 But what I am trying to say is to give the Committee the
13 benefit of our experience in dealing with the public
14 on a day by day basis, as to what the public wants to
15 know, not so much as to what maybe the University
16 professor wants to know. I could quote examples.
17 Again, from a standpoint of public relations in our own
18 industry, is it fair that the public should feel that
19 it costs \$24.00 to do business with us when really, in
20 fact, it costs \$13.46? I remember just a few years back
21 a very large, reputable department store was criticized
22 on the basis that for a \$20.00 budget account their
23 minimum charge for the charge was \$2.00. Now anybody
24 in the credit field knows that you cannot open a budget
25 account, do the investigation, do the work and the
26 collections for \$2.00. But when applied to the \$20.00,
27 the rate worked out at 54%. What I am asking the
28 Committee, is this fair from the standpoint that the
29 credit grantor, that the public should actually be
30 deceived into thinking that it is paying more than the

1 various legislative bodies are permitting the public
2 to be charged, 54% ?

3 MR. WHITE: Well, that's the reason
4 for this Committee. That's why we are exploring this
5 idea of standardizing the definition of interest,
6 developing a fairly simple formula so that these facts
7 can be made public. Now I don't know why you men would
8 take it upon yourselves to defend other types of
9 consumer credit.

10 MR. CAWKER: We are not defending
11 really, Mr. White.

12 MR. WHITE: Well you are objecting
13 though, --

14 MR. CAWKER: No

15 MR. WHITE: -- disclosure in other
16 fields.

17 MR. CAWKER: Well it's a question once
18 again, of course, of the definition of complete
19 disclosure. As Mr. Oakes has just pointed out, we have
20 had now, since 1939 and it is now 1963, this number of
21 years in which we have expressed our rate in dollars,
22 the cost in dollars, the cost in percent per month and
23 the cost in percent per annum. And still we find,
24 inevitably, not only from the consumer, but as Mr. Oakes
25 has said, from various other people, from professional
26 people, a complete misconception of the rate that we
27 charge. Now we know this is a job for us to do in our
28 industry, we know that.

29 MR. WHITE: Let us be clear on one
30 point -- you are not revealing the effective rate of

1 interest unless it happens that the amount of the
2 loan is \$500 or \$300, because if you are borrowing --
3 or perhaps I shouldn't make this as an assertion, but
4 as a question. If one borrows \$300 from you he is
5 going to be paying 24%?

6 MR. CAWKER: That's right.

7 MR. WHITE: And that will be true
8 of any sum less than \$300. If somebody borrows \$400
9 he is paying 2% on the first \$300 and 1% on the next
10 \$100, so the effective rate of interest -- well, I
11 can't calculate in my head -- it's going to be about
12 18%, isn't it?

13 MR. CAWKER: Its going to be higher
14 than that.

15 MR. WHITE: 19 or 20%.

16 MR. CAWKER: But see, sir, the thing
17 that makes it so difficult to accurately calculate
18 interest on a percent per annum basis is the variable
19 in the algebraic formula involved in time. And also
20 the variable involved in repayment. Now those things
21 are imponderables in the repayment of the contract.

22 MR. WHITE: Let's deal only with your
23 field for a few minutes, if I may. We are questioning
24 other types of lenders about the complexities in their
25 fields.

26 HENDRIE: The only reason we made a
27 reference to other fields is because we are not in
28 agreement that it is possible, in our opinion, to arrive
29 at a formula that would embrace all types of consumer
30 lending. So if we were put in the position of saying,

1 yes, we agree on disclosure and we didn't qualify it,
2 what we are saying is we agree on disclosure as far as
3 cash lending is concerned and if that's possible then to
4 find a formula. But we don't agree that it is possible
5 to find a formula if you are going to take into
6 consideration every single solitary type of consumer
7 transaction that may take place. We don't think so
8 because there are so many imponderables in there.

9 MR. WHITE: I don't want to get into
10 a long debate, I mean I know that is not the purpose of
11 this meeting, but you would acknowledge generally
12 that there can be a formula. Given a definition of
13 interest, and the formula for computing the interest, the
14 two would compliment one another, that you could figure
15 out the rate of interest for each transaction, although
16 it might be extremely complicated. Do you acknowledge
17 that?

18 MR. HENDRIE: Yes, yes.

19 MR. WHITE: Would you acknowledge
20 further that if certain tolerances were given, plus or
21 minus 1% of something, that it would be much easier to
22 reckon the effective rate?

23 MR. HENDRIE: No, I wouldn't say that.

24 MR. WHITE: Let's turn to your field
25 for a munute. You are making loans, 95% of your loans
26 are under \$1,000. So there could be no more than 1,000
27 calculations for every dollar you would lend out, then
28 there is going to be an effective interest rate, given
29 these maximums established, right? A maximum of 1,000
30 calculations?

1917

1 MR. HENDRIE: It depends on (rest of
2 sentence inaudible)

3 MR. WHITE: If a tolerance were given
4 then there would be some number less than that and if
5 the tolerance were broad enough then there might only
6 be ten or twenty or thirty. Do you follow me on that?

7 MR. HENDRIE: Oh, I understand what
8 you are getting at but I am also opposed to anything that
9 increases the cost of doing business at which we now
10 operate at the lowest gross rate on the continent and
11 where we have to exercise the most rigid economies in
12 order to even the monthly rate possible on our operations.
13 As an operator, which I am, I am dreadfully opposed to
14 anything that will increase the cost of doing our
15 business.

16 MR. WHITE: I am attempting to show
17 you that this wouldn't cost you any more because,
18 assuming some kind of reasonable tolerance, you could
19 have in your loan schedules, which are displayed in
20 every office, you could simply have the effective rate
21 posted there --

22 MR. OAKES: Mr. White, if I may comment,
23 sir. This tolerance could give a difference of 2%
24 between one contractual rate and another, if plus or
25 minus one.

26 MR. IRWIN: (First part of statement
27 inaudible) -- within a range of 2% --

28 MR. WHITE: Well, the point I wanted
29 to bring forth, Mr. Chairman, is that notwithstanding
30 the comments made by some of these gentlemen and other

1 witnesses, there are ways to do it and quite easily,
2 without adding to your cost. I don't know if I have
3 persuaded you to that point or not.

4 MR. HENDRIE: I don't think you have.
5 (Laughter) We keep an open mind, but we should have
6 to take a look at these tolerances.

7 MR. WHITE: I further suggest, sir,
8 that this would be good for your industry because,
9 assuming all lenders were required to do the same thing,
10 your effective rate, which is controlled, unlike other
11 lending rates, your effective rate would probably be
12 somewhat less than the people you are competing with.
13 I'm a little surprised that you resist on their account.

14 MR. HENDRIE: I said it was possible
15 on cash lending. I said I didn't think on retail
16 instalment or sales financing transactions and so on,
17 that it is possible to arrive at this same formula with
18 the same tolerances. As an industry we only said that
19 we think that if you are trying to arrive at a measurer
20 which is understandable to the people who actually do
21 the lending of money or the establishing of consumer
22 credit, that you must talk in their terms. If I was
23 talking, as Mr. Oakes said, to you distinguished
24 gentlemen here who know percentages backwards and
25 forwards, we talk, of course, in entirely different
26 language. But I think laws are written for the vast
27 majority of people and they are made simple to make them
28 understandable. That's our submission here.

29 MR. WHITE: Well, I think it would be
30 useful. But you will acknowledge that it's possible in

1 your field to do it quite easily, is that right?

2 MR. HENDRIE: In our field, in cash
3 loans, yes.

4 MR. IRWIN: One point follows here on
5 Mr. White, on the question of cost. I don't know
6 whether it would cost you a great deal more to do this
7 kind of thing, or any lending situation, whether it
8 would cost a great deal more to make these calculations.
9 But if such can be done, this intrigues me and I would
10 like your comments on it because it is a question that
11 keeps popping up all the time whenever we are dealing
12 with a lending situation that it costs a lot of money
13 to do business. Why should this be raised at all?
14 I costs money to sell a car, it costs money to sell a
15 refrigerator. Obviously it costs money to lend money.
16 Why should this enter into a confused picture in regard
17 to lending money?

18 MR. HENDRIE: That's very simple to
19 answer, sir. We operate under a ceiling and so
20 irrespective of the fact that our costs of business have
21 risen substantially over the years and are continuing to
22 rise, we come up against a gross rate of return that
23 there is nothing we can do about. In every other type
24 of business does not operate under a ceiling rate, there
25 is an adjustment according to the marketplace, the free
26 enterprise between what competition will stand and what
27 you can charge for your services and you will absorb
28 your costs as you go along. You know that. If you
29 were buying a suit today from your tailor, I wager to
30 say that you would be paying substantially more than you

1 did ten years ago and it probably wouldn't be any better
2 quality. He has adjusted for his costs, taxes and
3 everything else. We are so cost conscious because we
4 know that if our costs go up we are out of business and
5 we have had to -- when I say effect rigid economies --
6 we have had to learn how to operate in tinier spaces,
7 reduce rents and operate at --

8 MR. IRWIN: Mr. Hendrie, you are
9 defending yourself valiantly, but I agree with you
10 fully. Where you are operating, particularly under the
11 Small Loans Act, you started under a fixed ceiling and
12 any additional costs, however marginal, would be a
13 serious consideration for you. No, I was not asking
14 you to defend your position, I was simply asking for
15 a comment on why it is, in almost any other lending
16 situation, other than the one you have described today,
17 a great issue is made about the costs of doing business,
18 the cost of lending money. This is one reason why they
19 can't quote a rate of interest because it costs so much
20 to service the accounts. It strikes me that this
21 doesn't enter into the picture at all. A mortgage
22 company, for example, quoting a prime rate of $7\frac{1}{2}\%$,
23 doesn't want to explain to the borrower how much it is
24 going to cost them to open their account, keep track
25 of payments. Now granted in a mortgage company, because
26 you relate to the total volume of credit granted, your
27 costs are less per \$100 than in the case of the money
28 lending institution or instalment contract situation.
29 But it is still there and it always surprises me why
30 some people have to make a big issue of what it costs to

1921

1 lend money and others don't. Would you comment on that?

2 MR. HENDRIE: You mention a
3 mortgage lending company -- I'm thinking particularly
4 now of prime first mortgages -- the cost is not a
5 substantial factor there because you have your money
6 invested over a long period of time. A first mortgage
7 will run ten, fifteen or twenty years, so when you make
8 your investment, just the same as you convert short
9 term obligations into long term debentures, you have
10 arrived at a fixed cost situation for a long period of
11 time. Unfortunately, in the lending business in which
12 we are particularly engaged, you have a consistent and
13 rapid repayment of the obligations with the necessity
14 to reinvest your funds so there is a very rapid turnover.
15 If we stop investing -- when I say investing, making
16 loans -- if we stop making loans tomorrow, we would
17 liquidate the whole organization in about 15 months.

18 MR. IRWIN: Again, Mr. Hendrie,
19 if I may interpose here, you are defending yourself
20 unnecessarily. All I am trying to get at is the
21 philosophy. When we are talking about mortgages
22 lending at $7\frac{1}{2}\%$, there is no mention of the cost. But
23 when we get into a money lending situation like your
24 own or an instalment credit situation, we have this
25 problem of the cost of doing business. Surely, if I
26 am in business selling anything, my price includes my
27 cost of doing business plus some profit to me. So why
28 all this confusion? If the mortgage lending institution
29 can quote their price of the money at $7\frac{1}{2}\%$ per annum,
30 and out of that they would pay their expenses and get

1 some profit, then all you need to do is quote 24% per
2 annum for the cost of doing business. In other words
3 your price of lending money is 24% under \$300. The
4 price of lending money by some other instalment credit
5 arrangement is so much, 20% and out of that they pay
6 their own costs. But why, when we get into this field,
7 we always are faced with this problem of doing business.
8 Why don't you just set the price and pay your own
9 expenses, and don't bother the customer with your
10 problems?

11 MR. HENDRIE: We don't bother
12 the customer. We thought we were explaining the thing.
13 We certainly don't say to a customer that the cost of
14 doing business or the cost of opening an account or
15 carrying an account -- we have nothing to do with the
16 customer as far as that -- we were merely explaining
17 to the Committee.

18 MR. IRWIN: Why is the customer
19 who comes before this Committee always making enquiries
20 of costs that we must be made aware of? They say, "We
21 have to get 12% or we have to get 24% to stay in
22 business". And you get confused between the interest
23 and the cost of servicing these accounts. Why are these
24 two things confused? Why do they have to mention the
25 problem? Why can't they just say, "In order for us
26 to lend money we have to charge 12%"?

27 MR. CAWKER: Well, I hesitate
28 to speak for the sales finance companies who, I am sure,
29 are quite capable of speaking very adequately for
30 themselves, but I think there is one basic consideration,

1923

1 Mr. Irwin, and that is (a) we are dealing with a
2 difference in quality of risk. I think I can assume
3 that you are talking about the mortgage company who
4 states its rate at, I think they use the figure 7%,
5 and other types of consumer credit. And I assume you
6 mean by that the sales finance industry, retail
7 revolving credit accounts at retailer level and I
8 think, first of all, there is the type of risk and the
9 ease at which it can be investigated, if it's real
10 estate. And there is also the unit size, which is
11 very, very important. Now then, we get into the sales
12 finance field or possibly the department store budget
13 account, and for instance in the sales finance field,
14 we start out with the fact that the company rarely
15 has the opportunity to find out at first hand the normal
16 credit information that he should have at first hand.
17 He is handed a contract by a dealer, let us say, and
18 these are unusual costs as compared, I think, to the
19 mortgage company who can have a piece of property
20 appraised and draw a credit report on the individual
21 and arrive at a rate and say this is it, as we do. As
22 I think Mr. Hendrie tried to say, we don't make a big
23 story to the customer about why we need to charge these
24 rates. They are there. They are spelled out. And,
25 of course, the customer has the privilege of shopping.
26 I concur in the position that we should not always
27 take a look at a sales finance rate bid expressed as an
28 add-on, or whatever it may be, and convert it to a rate
29 per annum and say this is the interest cost of the
30 transaction because I strongly disagree that it is the

1 percent per annum cost of the transaction.

2 MR. IRWIN: This bugs me. I can't
3 find any answer in my own mind as to why it isn't.
4 The cost of lending money is the rate percent per annum
5 no matter how you express it. It's what I get on a
6 loan and if I have higher costs I have to charge higher
7 prices. No explanation is required.

8 MR. CAWKER: Well, we are a
9 consumer loan industry. The mortgage company is a
10 different identity once again, and the sales finance
11 company or the retail credit plan is something entirely
12 different.

13 MR. IRWIN: No matter what
14 lending situation one has there is a principal loan
15 and there is a principal to be paid and there is an
16 interest charge also paid.

17 MR. HENDRIE: That's not exactly
18 true, Mr. Irwin. Prior to 1913, when the first Uniform
19 Small Loan Act was enacted in the United States, there
20 were Usury Acts in force in all 48 States because of
21 course in the United States the interest rates are
22 reserved to the States and not to the Federal Government.
23 And so loans were made at, say, 6% per annum simple
24 interest rate, but they weren't made at that rate at
25 all because they were being made with brokerage fees,
26 bonuses or investigation fees, etc., which, in effect,
27 made the true rates when those factors were taken into
28 consideration, maybe 75 or 100 or better than 20% or
29 some other fancy figure. Now, in one of the -- the
30 things then that the Russell Sage Foundation did in

1 writing the first Uniform Act, of which the Canadian
2 Act is a copy, was to make sure that no other charges
3 of any description would be permitted so that the
4 rate expressed would be a true rate of so much per annum.
5 Now if we are going to legislate and you want a common
6 denominator expressed as percent per annum in credit
7 transactions, then I think this is where the difficulty
8 would lie, you would have to say you can't mark up your
9 prices, you can't charge for credit investigations, you
10 can't charge for collections, you can't have delinquency
11 fees, you can't put credit insurance on, you can't do
12 anything at all because this is going to change the
13 percent per annum cost of this particular thing. And
14 I don't think anybody can police a thing like that.
15 That's why I say the cost of doing business, of trying
16 to make that workable, I don't think it's workable.
17 It's only workable if you have a situation such as
18 our situation where we have a cash and where the law
19 says you can't make any other charges and so on.

20 MR. IRWIN: Well, Mr. Chairman,
21 I'll back away from that question. Actually you
22 stated what I was trying to do very well, that, in a
23 sense, if you have a Usury Law which sets a maximum
24 rate, then you are going to encourage the addition of
25 other charges and the issue becomes confused.

26 On other question. Generally
27 speaking, in cases of one of your companies, what happens
28 if -- well, take an example. Let's say I borrow \$100
29 on a contract repayable in 12 months and I decide to
30 pay it off at the end of the fourth month. What rebate

1 would I get?

2 MR. CAWKER: Well, the charge
3 is computed, Mr. Irwin, to the day the loan is retired.
4 In other words, you pay 2% per month on the use of the
5 money until the day the loan is retired. I think we
6 did mention someplace in here that there is no bonus,
7 notice or any other requirement. The rebate is the
8 full pro-rate, if you want to call it a rebate.

9 MR. IRWIN: In effect, I simply
10 pay for the use of the money that I actually had --

11 MR. CAWKER: As long as you
12 had it, that's right.

13 MR. IRWIN: At 2% per month if
14 it is under \$300?

15 MR. CAWKER: That's right, sir.

16 MR. IRWIN: Thank you very much.

17 THE CHAIRMAN: Mr. Lawrence?

18 MR. LAWRENCE: I was curious
19 about the Association? Is it composed of companies
20 exclusively that are licensed to make loans under the
21 Small Loans Act?

22 MR. CAWKER: That's right.

23 MR. LAWRENCE: Do the members
24 of your Association then only make loans under the Small
25 Loans Act?

26 MR. CAWKER: No. Some of the
27 companies are engaged in the sales finance business as
28 well.

29 MR. LAWRENCE: Some of them or
30 most of them?

1 MR. CAWKER: I don't think I
2 can say most of them, no.

3 MR. LAWRENCE: And how about loans
4 over \$1,500, does the same thing apply? For most
5 of the members of your Association are there parent
6 companies or subsidiary companies that do this?

7 MR. CAWKER: Make loans over
8 \$1,500? Yes, that's right.

9 MR. LAWRENCE: Company members
10 of your Association, do they do this too?

11 MR. CAWKER: Yes, they do.

12 MR. LAWRENCE: Quite frankly,
13 while I am not adverse to this Committee being used as
14 a sort of sounding board to get across good publicity
15 on behalf of some of your companies, I appreciate the
16 work that has gone into this brief. I was not here
17 to hear most companies in the main that act under the
18 Small Loans Act. In the first place it is outside
19 our jurisdiction in any event, but actually the main
20 abuses that are taking place in the credit field today
21 are over this amount. Your brief relates strictly to
22 the \$1,500 limit. I would hope you are going to come
23 back, or your parent companies are going to come back,
24 or your subsidiaries are going to come back and talk
25 about the field in which there are abuses today, mainly
26 over \$1,500 and also the acceptance company business.

27 MR. CAWKER: Well, I apologize.
28 We were asked to appear here as an Association of
29 Canadian consumer loan companies and for that reason we
30 have tried to deal with the history of the business since

1 the Act was passed. I believe our opposite number in
2 the sales finance are appearing and I think some of
3 the other individual companies are appearing.

4 MR. LAWRENCE: What's done over
5 \$1,500, this is still within the purview of your Associ-
6 ation presumably? Is it or not?

7 MR. CAWKER: Well, except that
8 certainly a good number of our members do make loans
9 in the area over \$1,500, yes.

10 MR. LAWRENCE: In other words
11 your Association deals only with those matters within
12 the Small Loans Act?

13 MR. CAWKER: Well, that is the
14 purpose of our Association. However, I think as a
15 general practice we are certainly interested in the
16 ethical behaviour of our members in their dealing in
17 the area over \$1,500.

18 MR. LAWRENCE: All right. Well
19 then, everything you have said in regard to ethics and
20 regard to disclosure and the rates and the dollar cost
21 and everything else, does that apply to your members
22 in the field over the \$1,500?

23 MR. CAWKER: Well I would have
24 to say this. I think there is a variation in the rates
25 charged over \$1,500. I have noticed recently that
26 some of our members have been most aggressive as a
27 result of some of the previous hearings by way of their
28 advertising programmes and stating aggressively what
29 their rates are, what their policy is. Of course, I
30 think this is probably the best guarantee that unethical

1 practices will stop that we can see. And I have been
2 most happy to see that a good number of our members
3 have been developing an advertising programme to let
4 people know what they are doing in the field over \$1,500.

5 MR. LAWRENCE: I gather then
6 that the answer to that is no? That your companies
7 don't necessarily follow the Small Loans Act and its
8 requisites over the \$1,500 mark?

9 I wonder if we could -- I mean
10 this information that you have given us -- I don't want
11 to appear rude or ungrateful in any way because I think
12 it is a very fine brief -- but as I say, we **are** here,
13 I hope, to help to expose some of the abuses in the field
14 today so that rectifying legislation can be forthcoming.
15 Your brief deals only with something that is already
16 regulated and even then it's regulated by another body.
17 I would hope that perhaps we could have you back
18 sometime for a discussion of the field beyond the limits
19 of the Small Loans Act. The Small Loans Act is working
20 wonderfully well. The only criticism we have had is
21 that the limits aren't large enough. We had a very
22 forceful presentation here one day that it should be
23 increased to \$2,500. There is no suggestion or no
24 comment from you people at all in your brief about
25 that and nothing about in this amount over \$1,500. I
26 just hope you are going to come back.

27 THE CHAIRMAN: Do you want to ask
28 that question?

29 MR. LAWRENCE: All right. How
30 do your associations feel about -- I mean, it's rather

1 frustrating, as far as this Committee is concerned, in
2 any event, -- what would you feel about increasing
3 the limits to \$2,500?

4 MR. CAWKER: Would you like to
5 answer that, Mr. Oakes?

6 MR. OAKES: We have had quite
7 a bit of discussion on this point in our own Association.
8 In the first place, just what would be the loss of the
9 Small Loans Act? The Small Loans Act and the whole
10 philosophy behind the Act is to protect the necessitous
11 borrower with very little bargaining power, the man --
12 in the early days of the Act the limit generally, across
13 the United States, was \$300. This was to protect the
14 small borrower with little bargaining power. The same
15 philosophy has existed, but with the increase or the
16 inflation in our economy, we find that it is common
17 practice for families to borrow, generally, up to \$1,500.
18 I might say that the demand for amounts above \$1,500
19 is nowhere near as great as amounts below this. So
20 in 1956 we ourselves suggested to the federal Parliament
21 that the rate, that the ceiling should be increased and
22 we, after a great deal of deliberation and trying to
23 analyze what is a small loan, came up with the figure
24 of \$1,500. Now when you go beyond that, transactions
25 start bordering on the commercial field. There are
26 many small businesses, or ventures where people are, or
27 businessmen use interim financing and borrow \$2,000 --
28 particularly I'm thinking of small storekeepers and
29 various other people that get commercial credit. I
30 don't know how you differentiate between them. It is a

1 consumptive type loan and a productive type loan -- when
2 it comes to extending the limits of the Small Loans Act.
3 I personally feel that the present limit under the
4 Small Loans Act is adequate in the protection of the
5 small borrower. Now whether we should venture into
6 the field where we interfere with commercial transactions,
7 I don't know. That is something possibly for other
8 public bodies to decide. I feel that competition in
9 the field above \$1,500 today is such, where you have
10 a full range of rates. When you say how does the large
11 loan business differ from the small loan business, I
12 would say the members of this Association, from an
13 ethical standpoint and a method of operation, it doesn't
14 differ. But you do get a great variety in rates and
15 this, of course, depends on a businessman's individual
16 decision on an individual transaction. There are some
17 companies that can make commercial loans, many of these
18 loans are in the commercial field, at maybe 9 or 10%.
19 It depends upon all the factors involved, including
20 risk factor. Other situations, where it may be a very
21 fair transaction, are at 18%.

22 MR. LAWRENCE: I'm not arguing
23 about the rate at all. What I am wondering about is
24 whether or not there is disclosure of interest, or even
25 of costs?

26 MR. OAKES: Yes, sir. Any company
27 in this Association that does business above \$1,500, I
28 can assure you there is full disclosure of costs, --

29 MR. LAWRENCE: You mean a dollar
30 rate?

1932

1 MR. OAKES: A dollar rate --
2 dependent upon the type of method used to compute the
3 charges.

4 MR. MacDONALD: Wouldn't an
5 increase in the level of the limit of small ~~loans~~ be
6 a futile gesture -- (rest of statement inaudible)

7 MR. OAKES: Yes, sir, it would.
8 I can tell you right now that there is restricted
9 service in the field between \$1,000 and \$1,500 and it
10 is not by the choice of the lenders. When you find
11 particularly small companies -- maybe Mr. Jones would
12 like to say something on this as a small Canadian
13 independent. When you find a small Canadian independent
14 company paying as much as $6\frac{1}{2}\%$ or 7% for their money, it's
15 very little use to tell Mr. Jones, "Well, of course the
16 spread of the rate is more than that". He doesn't want
17 to put, between \$1,000 and \$1,500, money that he ~~pays~~
18 $6\frac{1}{2}\%$ or 7% for, out at 6% simple per annum. That's the
19 crux of the whole problem, sir. However those rates
20 are set by Parliament.

21 MR. LAWRENCE: Statistics show
22 there is not much action in that range.

23 MR. OAKES: If you just take
24 that segment of the loan, Mr. Lawrence, you are not
25 making money. This is why there is restricted service
26 in that area. What Mr. MacDonald is saying is, if you
27 extended the Small Loans Act at existing rates you would
28 find even a greater freeze-up in the service. It is
29 this point that the fair rate, or the unfair rate, from
30 the lender's standpoint, which created many of the abuses

1933

1 which you speak about where you find these unscrupulous
2 second mortgage people's transactions with large discounts
3 and balloon payments; all the types of abuse that we
4 have become so familiar with for the last three or four
5 years.

6 MR. MacDONALD: Where do most of
7 your companies get their capital?

8 MR. JONES: There are many, many
9 sources, from sale of preferred and common stock, from
10 the bank itself as a wholesaler. Those would be the
11 principle means.

12 MR. MacDONALD: Is the major
13 source of it from the bank as a wholesaler?

14 MR. JONES: I can only speak
15 (next few words inaudible). Basically, in that case
16 it would be from the bank. This, of course, can be
17 changed over a period of years.

18 MR. MacDONALD: What is the rate
19 you would have to pay the bank?

20 MR. JONES: That varies with
21 the prime rate anywhere from $5\frac{1}{2}$ to 6%.

22 MR. CAWKER: And in some cases,
23 Mr. MacDonald, added to that cost is the maintenance
24 of a compensating balance.

25 MR. OAKES: This doesn't apply
26 so much to the large companies, Mr. MacDonald. Basically
27 they try to maintain their financing on one-third equity,
28 one-third short term and one-third long term. And there
29 is a move over from the short term into preferred stock
30 or debenture as used in attempting to skim out the

1934

1 company's indebtedness in relationship to its growth.

2 MR. CAWKER: I think Mr. White
3 raised an eyebrow on compensating balance. It's a
4 practice, I think, that developed across the border and
5 it seems to be creeping into the banking fraternity here.
6 Simply explained, it might be this. One of our companies
7 might have \$100,000 line of credit and the requirement
8 would be to maintain a balance of \$10,000 in a current
9 account. So, in other words, you pay interest on
10 \$100,000 and have the use of \$90,000.

11 MR. WHITE: Is this going on now?

12 MR. CAWKER: Yes, it is.

13 MR. WHITE: I understood from a
14 banker we had here a week or two ago that it wasn't in
15 the commercial field, although they are going into it
16 in the small loan field.

17 MR. HENDRIE: And, Mr. White,
18 what is the true interest rate when the bank makes you
19 keep a compensating balance? (Laughter)

20 MR. LAWRENCE: Anyway, before we
21 leave the subject of the limits outside the Small Loans
22 Act, I suppose we could go into it here today. I don't
23 suppose we could finish it but I would certainly like
24 to see some of these Tables extended, at least from
25 some of your other companies, who operate outside the
26 Small Loans Act. Most of your members do have these
27 other companies, I gather?

28 MR. CAWKER: Well, I can think,
29 Mr. Lawrence, of --

30 MR. LAWRENCE: This is the field

1 we are interested in, not the Small Loans Act.

2 MR. CAWKER: You have heard from
3 the Canadian Acceptance Corporation, I think, who, I
4 believe, explained to the Committee their programme in
5 the area over \$1,500 in the second mortgage or first
6 mortgage field. They recently had an advertising
7 programme which I think set out very fairly and very
8 clearly and, if I recollect correctly, I think their
9 rates for a second mortgage were quoted in the area of
10 1% per month or 12% per annum. The largest Canadian
11 Company, Niagara Finance, recently set up a company
12 specifically to deal in the field over \$1,500 and
13 more specifically with mortgages and I think they have
14 clearly stated their rate to be in the area of 1 to 1 $\frac{1}{2}$ %
15 per month.

16 MR. LAWRENCE: This is with
17 security on land. I mean this is one of the things we
18 don't know, whether your companies do get into this
19 field without land security, we just don't know.

20 MR. JONES: He is referring to
21 these large loans. I think that this could be done, but
22 as has been said, the rates above \$1,500 become
23 competitive and in the case of my own company, this
24 rate is determined in many ways such as the creditworthi-
25 ness of the man, etc. And this way we come up with
26 different rates, they will vary from a very low 12% to
27 probably 21%.

28 MR. LAWRENCE: This is why I am
29 directing my enquiry to Mr. Cawker rather than to any
30 one of you as individuals because I can imagine there is

1 certain competitive information that you would be very
2 loath to let out as far as your own individual company
3 is concerned. But surely your Association might be
4 able to prepare something for us to give some of these
5 tables beyond the \$1,500 limit.

6 MR. HENDRIE: Basically we don't
7 have those figures. That's number one. All we can do
8 is tell you from a fair exposure to the field generally,
9 what the rate appears to be settled at. If I were
10 asked to give an opinion I would say probably anywhere
11 depending on security and, as Mr. Jones has said, risk
12 and so on, anywhere from 1% per month to possibly as
13 high as 1 3/4, if there is these variables of security,
14 credit risk -- it's possibly a commercial transaction
15 and may be very short term -- this, of course, is
16 getting beyond the field that we have tried to deal with
17 here, as you have said, and that is the field of the
18 straight consumer loan, and possibly directed toward
19 the necessitous borrower.

20 MR. HENDRIE: You were saying,
21 Mr. Lawrence, that this is the field that the Committee
22 is largely interested in. If I could make a submission
23 to the Committee, I think one of the problems involved
24 in the field over \$1,500, is not so much the rate that
25 is being charged. The rate will find it's own level.

26 MR. LAWRENCE: I appreciate that.

27 MR. HENDRIE: I think the
28 refunding of the charges is something that would be, I
29 believe, within the province of this Committee to
30 recommend for legislation and I would suggest a refunding

1937

1 of charges under the Rule of 78ths, which is written
2 into the law, I believe, in about 20 or 22 states in
3 the United States. You see, if you have uniform refund-
4 ing, then you are not going to run into these situations
5 where someone makes a substantial charge for a deal and
6 then somebody decides that they want to pay it off within
7 a relatively short period of time and then at this
8 moment there is no uniformity by legislation in connection
9 with refunds. They can either refund or not or whatever
10 they want to do. If we had uniformity of refunding,
11 then everybody would know exactly what you pay at the
12 end of 30 days or 60 days, you would know precisely
13 what portion of that unearned charge was going to come
14 back. I know our company, as an individual company,
15 has always used the Rule of 78ths for refunding on our
16 loans over \$1,500 and it is used in all our operations
17 in the States regardless of whether it's required by
18 law or not. I think that should be extremely clear.
19 All that is is the sum of the digits, you take the months
20 from 1 to 12 and you add them up and it comes to 78 and
21 you do your refunding on the payment at the end of the
22 first month would be 78/100ths of the charge. And so
23 it works on down. But that's a uniformly fair method
24 and avoids the situation such as I read about in the
25 newspaper where somebody, for example, got a very large
26 bonus and he wanted to go and pay it, or they did pay
27 it up, and they were charged \$1,000 or \$1,500 for the
28 deal and that amounted to maybe half the carrying charge
29 simply because the refund wasn't on a uniform basis.
30 And that could be done very easily and would help to

1938

1 eliminate some of the abuses in the over \$1,500 field.

2 MR. LAWRENCE: I think it would
3 be very worth while. But the point is, you people
4 represent not only the small loans industry, you
5 represent the direct cash loan industry -- I mean they
6 are not the other suggestions that some of the others
7 have made. You are asking for a great big bash on the
8 head with some sort of weapon here if you don't come
9 along and make these suggestions. Your brief was very
10 worth while, but it deals with something that is already
11 very strictly regulated by the government. I have to
12 admit it, I've never even heard of the Rule of 78ths
13 before.

14 MR. HENDRIE: I'd like to send
15 you a brief on it.

16 MR. LAWRENCE: I wish you would.

17 MR. HENDRIE: Another suggestion
18 would be -- and this, as you know, has come before
19 Queen's Park before and I don't know why it hasn't been
20 acted upon -- and that is a central registry for lien
21 securities. You see, people can get hurt today because
22 of no central registry set-up. If someone went to
23 purchase an article, supposing somebody bought an
24 automobile and, this frequently happens, later discovers
25 there is a lien on it they didn't know anything about
26 it simply because it was in another County and who can
27 go and check all the different counties in Ontario.
28 I would think that a central registry with electronic
29 equipment and everything -- and that's very feasible
30 because -- British Columbia has a central registry out

1 of Victoria now and it works beautifully there and it
2 avoids a lot of hardships for people.

3 MR. LAWRENCE: How long has it
4 been there?

5 MR. OAKES: I believe about 12
6 years. And anybody in the Province of B.C. can tell
7 instantly whether there is a lien or not on the auto-
8 mobile or anything else.

9 THE CHAIRMAN: Mr. Bukator?

10 MR. BUKATOR: Yes, Mr. Chairman,
11 I would like to ask Mr. Hendrie a question. You
12 mentioned a purchase of \$20, on which you charge some
13 \$2.00, was it, just to handle the account. And then
14 you say as a percentage, if it was figured on a per
15 annum rate, would be 54%, if you figured it percentage-
16 wise.

17 MR. HENDRIE: It works on a five
18 month contract, sir.

19 MR. BUKATOR: On a five month
20 contract for \$20.00, it would be 54%. Well, what
21 happens when the purchaser, who has now established this
22 book work for you and makes it a loss to you actually,
23 because you said the \$2.00 wasn't sufficient to cover
24 it, comes back and purchases another item within two
25 or three weeks.

26 MR. HENDRIE: Well, sir, that
27 is the only reason we make the transaction in the first
28 place.

29 MR. BUKATOR: And then it goes
30 on -- I know a case where the thing started off as a

1940

1 \$20.00 purchase and it piled into \$200 and \$300 and
2 the payment now is \$16.00 a month. Why shouldn't that
3 individual know how much they are paying for the items
4 that they are buying? This is a revelation that the
5 public should have. They should know, dollarwise,
6 what they are paying and you can rest assured that they
7 won't buy that many items if they know that they must
8 pay not only 54%, but across the board for many years
9 it might even add up to more than that. This is why
10 the Committee was set up and I can assure you that I
11 will press for disclosure of interest rates on small
12 items purchased by the people who have not a professor
13 for a husband, you see, and they can't calculate this
14 for the housewife who doesn't know how.

15 MR. HENDRIE: Well, sir, may I
16 give an example. Of course, we do not use that type
17 of credit **system** within our own group of companies. I
18 use it as an illustration as a further question. Why
19 should the public feel, be made to feel, that they are
20 being exploited, at the rate of 54%? When you take the
21 case of an individual family -- and credit does apply
22 to individual families -- here is a family who initially
23 can only afford to handle a \$20.00 item, some very
24 necessary item, and the charge is \$2.00. Would it be
25 anybody's wish that these people, because they only
26 require \$20.00 should be denied that?

27 MR. BUKATOR: Oh no, no. I didn't
28 try to make that point. But I think that individuals
29 should know exactly what they are paying for the use of
30 that money for that period of time because in three or

1941

1 four weeks or a month they may save and pay cash and
2 maybe get 10% knocked off the item. This is the only
3 thing that the people should know.

4 MR. OAKES: I could tell you, sir,
5 that if they were told that it cost them \$2.00 to open
6 a \$20.00 budget account, they would weigh it in the terms
7 of \$2.00 a month and in the terms of 54% and decide yes
8 \$200 is worth this accommodation.

9 MR. BUKATOR: Well, Mr. Chairman, at
10 least they would know what they were doing before they
11 signed on the dotted line.

12 MR. OAKES: Mr. Bukator, my guess would
13 be that if this particular transaction -- the \$2.00 and
14 the \$20.00 one -- was publicized as 54% per annum, that
15 you would shortly find the \$2.00 charge disappearing
16 but it would be incorporated in the price of the article
17 so that the customer would still be paying it only now
18 it would a cost item instead of an interest item.

19 MR. BUKATOR: Then it does become
20 competitive among people who sell that particular item.

21 MR. OAKES: I, as I said, have been
22 in this business a long time and I saw in many states
23 who have restricted laws relating to borrowing, that
24 couldn't prevent any borrowing whatsoever even though
25 people moved, for example, that their charges were high
26 or anything else, that didn't prevent any borrowing
27 of any description because there was a need there.

28 MR. BUKATOR: That being the case,
29 then they should be told what it is going to cost them
30 because it is not going to prevent them, but at least they

1942

1 will know, percentagewise, what they are paying for the
2 cost of that money. If it is not going to interfere then
3 why not tell them?

4 MR. HENDRIE: Well, I think it will
5 be absorbed in costs and it will go under the table.

6 MR. BUKATOR: It will go on the item
7 itself. If that item costs so much you can still go
8 out and shop for that item and buy it where you can get
9 it for the cheapest amount.

10 MR. HENDRIE: Maybe so.

11 MR. CAWKER: Well, for cash or credit.
12 I think this is the essence of it, isn't it?

13 MR. HENDRIE: Maybe so.

14 MR. MacDONALD: If he knew he were
15 paying 54% he might go and borrow the \$20.00 from the
16 bank and pay only 6%.

17 MR. BUKATOR: I feel very confident
18 that it is not going to offend anybody. They will, I
19 think, go to where they can borrow this cash money that
20 you speak of, and then buy the item for cash and pay
21 you people this rate of interest that you indicate so
22 clearly in this brief that you submitted, which is
23 excellent.

24 MR. HENDRIE: It would cost .40¢ to
25 borrow it from our Company.

26 MR. BUKATOR: There you are, .40¢.
27 Already the party has saved \$1.60 on that item. (Laughter)
28 It's as simple as that.

29 MR. MacDONALD: Mr. Chairman, in the
30 interest of timing, I would like to concentrate on one

1943

1 area. I can't reconcile some of the figures in your
2 opening paragraph. You say that 99% of the money is
3 written by members of your Association. Now I did a
4 calculation of the list of the members of your Association
5 at the back and there are 54 of them and yet there are
6 83 companies. You mean to say that roughly 30 companies,
7 who are not members of your Association, are only doing
8 1% of the business?

9 MR. CAWKER: I believe that's the
10 calculation, sir, yes.

11 MR. MacDONALD: Really?

12 MR. CAWKER: Yes.

13 MR. JONES: There may be some companies
14 under the Act, sir, that predominantly are not a small
15 loans business, in order to service any business that
16 might come in they do not actively seek business under
17 the Small Loans Act. It may be a convenience to a
18 conditional sales operation, but they are not actively
19 seeking business under the Small Loans Act. They have
20 it there as a convenience to give their retail or
21 acceptance customers that may require that service.

22 MR. MacDONALD: Would you say this is
23 the main reason why the 30-odd companies are not members
24 of your Association, that they are not primarily interested
25 in this field? It's just sort of an auxiliary service
26 that they use whenever --

27 MR. JONES: That's right.

28 MR. MacDONALD: Well, following from
29 that there is one area that I must say is preoccupying
30 me more and more. I was interested in your Table on page

1944

1 11 (1871) in which you indicate that consumer loan
2 companies are becoming involved solely in retail sales
3 credit. The figures are that you have nothing back in
4 1949, you have 15 millions in 1957 and 45 millions in
5 1962. Still a small percentage of your overall loans
6 and on page 8 you have this rather significant sentence:
7 "Sales finance companies which specialize in this service
8 to dealers rarely deal directly with the prospective
9 purchaser at the time of purchase". Now, in the instances
10 where your companies are, in effect, providing the credit
11 for a sales purchase and here, incidentally, if I may
12 interject, here is where I find it very difficult to
13 distinguish between a cash loan and what you describe
14 as sales financing. Because it is all so neatly tied
15 into a bundle. Let me give you a specific case.

16 MR. LAWRENCE: (Statement inaudible)

17 MR. MacDONALD: No, no, it can be
18 done right here. If a small loans company is providing
19 money for the completion of a -- for sales credit -- how
20 are you going to distinguish your loan? Let me give
21 you a specific case which I would like to see this
22 Committee pursue. I have here, for example, a contract
23 that was from the Mural Stone Company out in Downsview
24 where they went up in Northern Ontario and the contract
25 was to apply green horizontal sidings on a complete
26 house, four sides, from the foundations to the eaves,
27 the gables to be done in coral and so on and so on.
28 \$1,895.00. The man is handed a contract which says
29 \$1,895.00 plus carrying charges in 60 monthly payments
30 of \$48.50. So his total outlay was going to be in excess

1945

1 of \$2,900.00. This was handled through the Premier
2 Finance Corporation, 500 University Street. Now the
3 thing that puzzles me is, if your companies are getting
4 into this, is what sort of watching Greek do you have
5 over the sales practices which you, in effect, take
6 over. In this specific one I have got here -- I have
7 got a thermofax copy of it right here -- the agent
8 who sold it, his name has been rubbed out. The man
9 who signed it, his name has been rubbed out and his
10 wife's name has been put in and I am told that this was
11 done after the contract was written. This information
12 I get from Bill Grumand, Q.C., who was a former member
13 of this legislature and is familiar with this kind of
14 thing. But yet this is then taken by a finance company
15 and this rather little educated person is told he can
16 get his house redecorated in this fashion for \$1,895.00
17 when in fact he finds that he has got just under \$3,000.00.
18 Indeed, the final book that he got from the company
19 wasn't 60 payments of \$48.00, but he found when he got
20 it that it was 59 payments of \$48.50 with the 60th
21 payment being \$75.50 so that it added another \$27.00
22 to the contract. Now I come back to my basic question.
23 Your companies are moving into this. Do you go back and
24 examine the nature of the deal, whether there was mis-
25 representation in it, whether there was even fraud in
26 the contract, because here names have been rubbed out
27 and things of this nature, before you accept responsibility
28 for this?

29 MR. CAWKER: Well, yes. I think this
30 is just good business practice, Mr. MacDonald. Frankly,

1946

1 I have a fair amount of regard for the good business
2 judgment of our members and I can't possibly understand
3 that one of them would take that kind of a contract.

4 MR. MacDONALD: This is one of your
5 companies?

6 MR. CAWKER: They are not a member, no.
7 What I'm saying, this is --

8 MR. MacDONALD: I'm going to go back
9 to that sentence in your brief: "Sales finance companies
10 who specialize in this service **to dealers** rarely deal
11 directly with the prospective purchaser". So, by your
12 own admission, you don't go back to the purchaser to
13 find out whether he was led up the garden path, high
14 pressured, dealt with in various --

15 MR. OAKES: I can outline that practice
16 Mr. MacDonald, as far as our own **industry** is concerned.
17 You notice there, in this case there has been a fraudulent
18 act, I assume by the salesman to make this paper a
19 worthwhile contract to a sales finance company who are
20 prepared to discount it. Now in our own industry and
21 just recently we have had some discussion with Ottawa,
22 with the Department of Insurance, there are many small
23 merchants in communities all across Canada, who do not
24 deal directly with a sales finance company. A person
25 comes in to purchase an article, say, for \$50.00. The
26 dealer would then refer him to one of our branches and
27 in every case we reserve the right whether or not we will
28 accept this contract on the basis, again, of the man's
29 character, ability to repay, all these points. And so
30 we are dealing directly with the purchaser. He is

1947

1 referred to us by the merchant, but we make the decision
2 whether to take it. If it is for the purchase of a
3 piece of equipment or some durable merchandise, it could
4 be placed on a conditional sales contract.

5 MR. MacDONALD: Well, Mr. Chairman,
6 I'll leave it then if it doesn't relate to these people
7 here. But it seems to me this is an area -- you advised
8 me to take it up with Mr. Sedgwick, and I shall -- this
9 is an area that we have really got to take a look at
10 because I noticed in the latest news stories of this
11 British Bill that is now being introduced, namely, that
12 when a contract is entered into by a door-to-door
13 salesman, usually there are various form of pressure.
14 The British Act is now going to give them four days
15 in which they can back out of it. Apparently the latest
16 news story indicates that they are also giving particular
17 consideration to the business of where the contract is
18 immediately discounted to a finance company.

19 MR. CAWKER: Well, I would say, Mr.
20 MacDonald, as a matter of business practice, and I'm
21 sure my friends in the sales finance company would not
22 disagree with this, but a door-to-door selling campaign
23 resulting in conditional sales contracts presented to a
24 sales finance company for discount, I can only say that
25 generally speaking the flag is up right there. This is
26 something that requires usually some looking into and
27 as sales finance companies -- and my company is engaged
28 in the sales finance business -- the integrity of the
29 dealer and his salesmen and the type of paper he is
30 submitting, is of paramount importance because if we are

1948

1 buying contracts where there has been misrepresentation,
2 then all we are doing is running off down the drain
3 all the good public relations we have tried to develop
4 through the years. We are making enemies, not friends.

5 MR. LAWRENCE: Let's not exclusively
6 pick on salesmen.

7 MR. CAWKER: No, no. I said any
8 dealer, whether it be a dealer who employs salesmen
9 or whether it be a car dealer or appliance dealer. His
10 integrity, the way he stands behind his product, the
11 way his salesmen sell. They like the conditional sales
12 contract, this is where we say that there is limited
13 contact with the customer. So if we find that some
14 funny things are happening as in the case you have
15 brought up, Mr. MacDonald, names are switched around,
16 the charges are different from what the company under-
17 stood -- and I think any good, ethical, reputable
18 sales finance company will do a cross-section of direct
19 confirmation with the customer, "Did you get delivery?"
20 "Was it as indicated here -- a 1959 Plymouth, or what-
21 ever?" Because otherwise, first thing you know you have
22 got a snowball on your hands and it's then the sales
23 finance company or the lender who pays the piper.

24 MR. MacDONALD: Well, I'll leave it
25 there, Mr. Chairman, except that I think this is a really
26 important area in the cost of credit because the net
27 effect of this procedure is that the company selling it
28 discounts it, which means that the price as far as the
29 consumer is concerned, is gone up -- I suspect if we were
30 able to get percentage figures -- a pretty shocking

1949.

1 percentage is increased. Like here he gets an \$1,895.00
2 cottage and he is charged \$2,900 and some dollars. I
3 have learned, more by accident than by design, in the
4 last week or so of this going on in vacuum deals and
5 many other kinds of selling and, in my view, it's right
6 within the purview of this Committee, because it's a
7 part of consumer credit.

8 MR. WHITE: That's why I was asking
9 Mr. Cawker if the members of the Association, the
10 corporate members, dealt with other things than the
11 Small Loans Act. I guess I was asking my question in
12 too obtuse a way. I understood you to mean your companies
13 deal almost exclusively with small loans.

14 MR. CAWKER: As Mr. MacDonald brought
15 up, I think we had a very -- the companies who are
16 members of our Association, and I have to apologize again
17 for the fact that we thought we were asked to come here
18 as an Association of Canadian consumer loan companies --
19 and within that Association I think our penetration into
20 the sales finance field was one point --

21 MR. WHITE: 1.1 -- page 11.

22 MR. CAWKER: 1.1. For that reason,
23 because there is an Association of sales finance companies
24 who, I believe, will appear before you, we did not deal
25 with that area.

26 MR. WHITE: Well, I notice, Mr. Chair-
27 man, the federal Small Loans Act states the cost of any
28 loan shall not exceed, etc. But on the Central contracts,
29 rendered to us, it says the rate will be such and such,
30 bearing out Mr. Oakes contention that a maximum established

1 by the government becomes the market rate. The maximum
2 becomes the minimum.

3 MR. OAKES: In this case it does so
4 because the rate is so tight. We mentioned that we do
5 have the lowest cost small loans rate in the world and
6 the maximum --

7 MR. WHITE: Didn't you infer, though,
8 that the maximum does become the market. I mean if the
9 maximum were three, that would become the market, likely?

10 MR. OAKES: No, sir, because there are
11 many states in the United States where the fixed rate
12 may be three, but there are many members operating
13 at $2\frac{1}{2}$, $2\frac{3}{4}$. Under the Canadian rate, it is such a
14 tight rate that there is no room for this competitive
15 factor. In effect, as I mentioned to Mr. MacDonald,
16 many of the small operators are disregarding, although
17 they own licences for the convenience of their existing
18 customers, they do not aggressively seek business under
19 the Small Loans Act because of the tight rate.

20 MR. WHITE: There is no price
21 competition?

22 MR. OAKES: There is no price
23 competition.

24 MR. HENDRIE: The rate in Alaska,
25 Mr. White, is 4% per month or 48% on the first 300, or
26 150, or something, and I don't know of anybody who is
27 operating in Alaska, including ourselves, who charge a
28 4% rate. In Australian, each one of the Australian states
29 legislate on interest separately, and I don't know of
30 anybody who is charging the maximum rate there. And in

1951

1 England, where they have no legislation, but they have
2 a permissive rate, which is considered, if you took a
3 case to Court, that 4% per month on the unpaid balance
4 is not unconscionable. Certainly our company is
5 operating at a substantially lower rate than that in
6 England. But that's where you have rates that allow
7 for competition. Where you get down as in the small
8 loans field, as Mr. Oakes said, you have much room to
9 manoeuvre any more.

10 MR. OAKES: There is no price
11 competition in this field right now because the rate is
12 depressed.

13 MR. WHITE: Well, would you agree
14 with the economists who universally hold that the
15 disclosure of interest rates would introduce a measure
16 of price competition that doesn't now exist?

17 MR. OAKES: I didn't know the econo-
18 mists were in universal agreement on that. I didn't
19 think economists agree on anything. (Laughter)

20 MR. WHITE: Any economist that I have
21 ever read has expressed himself on the subject and is
22 very much in favour of improving the market by the
23 revelation of rates, according to a formula.

24 MR. OAKES: Well, we have had complete
25 disclosure, as you know, since 1939, but the economic
26 facts of life are there and in spite of the fact that
27 we have had disclosure there really is, as you have just
28 brought up, there is no competition costwise.

29 MR. WHITE: You are not setting forth
30 the effective rate though.

1 MR. HENDRIE: What, on our loans? The
2 effective rate is shown on our loans.

3 MR. WHITE: Well, the effective rate
4 is not shown as a percentage figure. If I borrow \$400.00,
5 the effective rate is not shown.

6 MR. OAKES: Mr. White, may I explain
7 this, sir. On the average chart, for a member of our
8 Association, if you showed an effective rate on, say,
9 every ten dollars of loan, you would have to produce
10 something like 650 charts. The question is would you
11 have 650 different rate statements printed on your chart
12 or would you depend upon the typist typing in effective
13 rates on each loan transaction. I am just speaking
14 about human error there. It would be tremendous as
15 far as documents are concerned. That is the problem,
16 sir. Either to print 650 different types of effective
17 rates for each \$10.00 and each maturity, or to have
18 the typist type it in at the time the loan is made.

19 MR. WHITE: Well, where it says in
20 instalments of \$50.00 a month you would put the effective
21 rate of 19%.

22 MR. OAKES: Well, sir, that would be
23 fine, but you do leave yourself open to a lot of incorrect
24 figures. This is one of the main problems.

25 MR. HENDRIE: One of the ways to
26 simplify it would be to --

27 MR. WHITE: Well, I thought your
28 colleague had already conceded it wouldn't be a difficult
29 problem in your industry?

30 MR. HENDRIE: I conceded only on the

1953

1 basis that we are doing it as we are. I didn't understand
2 that we were going to have it broken into groups of
3 loans. I merely said that we are already expressing it
4 as an interest rate. I would rather have the federal
5 government raise the rate to 2% on all loans right
6 straight up the line, then we would have --

7 MR. OAKES: I think from a practical
8 standpoint, Mr. White, that if anybody knows, if the
9 public is educated to any one rate, it is the fact that
10 licensed loans companies charge 24% per annum. There has
11 been so much publicity. I know socially, if I am
12 introduced, some people say, "You're one of the fellows
13 that charge 24% per annum". I think if there is one
14 universal part of public reputation it is the fact that
15 it is very costly to deal with a small loans company.

16 MR. WHITE: I think everybody would
17 agree with that, the tremendous publicity over the past
18 few years. I don't want to get back into a debate
19 about the simplicity of it.

20 MR. SANDERCOCK: Most of the things
21 I had on my mind have been pretty well answered. I was
22 just very happy to go over this brief here. I think
23 it all boils down pretty well that the borrower should
24 know exactly what he is paying for the money that he
25 borrows. I think it has been pretty well explained
26 here. I think Mr. Cawker read this brief here very, very
27 well. A number of years ago -- (rest of sentence
28 inaudible).

29 THE CHAIRMAN: Mr. Reilly?

30 MR. REILLY: Yes, Mr. Chairman, there

1954

1 are one or two items I would like to check here, please.
2 On page 28, Mr. Cawker, your concluding thought, in
3 which you say that "the final point we wish to emphasize
4 is that all credit grantors dealing with the
5 public and not already required to disclose their costs
6 should be included". Do you have someone, or some group,
7 specifically in mind who are not already required to
8 disclose their credit costs?

9 MR. CAWKER: Mr. Reilly, I think
10 possibly we have sort of had our fingers rapped already
11 for springing to the defence of some of the other credit
12 grantors, but I would have to say this, that I feel
13 that many people take it for granted that it is too
14 easy to develop a formula. Now, as I said earlier, I
15 have been in this business for 28 years now and if I
16 were operating a, let us say a revolving budget plan
17 -- and I think that probably serves a purpose in our
18 scheme of things -- I would shudder to be faced with
19 developing a formula which would be all-embracing any
20 more than going any further than we have here in a
21 statement of rate. Today I have heard actually the first
22 criticism of the fact that we have what we thought was
23 complete disclosure. I can subscribe to what Mr. Oakes
24 has said, that there would be an awful lot of paper
25 involved to go any farther than we have.

26 MR. REILLY: Do you know of any
27 credit grantors that are not disclosing rates now? Or
28 their costs?

29 MR. CAWKER: Yes, I would have to
30 say I know many.

1955

1 MR. REILLY: On the following page,
2 in your Appendix A, Mr. Cawker, under (d), you say that,
3 "Every Member shall, if so requested by the borrower"...
4 then they give him a copy of the contract. Now, one
5 of the members of this Committee explained that he had
6 difficulty, or one of his clients or friends or
7 constituents had difficulty, in obtaining a copy of a
8 contract. I wondered why you should say, "if requested
9 by the borrower"? Wouldn't it be just good common
10 sense and plain good business to give him a copy of
11 the transaction?

12 MR. CAWKER: I think I would have
13 to say that that is the general practice today, Mr.
14 Reilly. I think this is one item, because it has never
15 been a problem in our Association or with our members.
16 It might have, since 1944, been reworded or improved,
17 but it has never been a problem. I think I can safely
18 say it is standard practice in our industry to give
19 the borrower a copy of the pertinent documents.

20 MR. REILLY: Thank you, Mr. Cawker.
21 Now, you say you have been subject to some criticism.
22 Let me tell you, sir, as a member of the Committee, that
23 I think you have a very complete brief and I think that
24 you have rendered a service to this Committee today. I
25 am not in accordance, personally, with some of the
26 comments that have been made. I don't agree with the
27 member from Niagara Falls from the standpoint of \$2.00
28 or 54%. I think if people know they are going to spend
29 \$2.00, they will assess it on the basis of \$2.00 or not
30 and under those circumstances either accept the service

1956

1 or reject the service. This is their privilege. I am
2 sorry that I have to disagree with members for whom I
3 have a great deal of respect, such as Mr. White and
4 Mr. Irwin. I don't think that giving the person a
5 percentage rate is going to give him the information
6 that he requires because, according to your brief here,
7 what he requires in most instances is the dollar value.
8 Now, on one of your pages it was pointed out that we
9 don't all -- I think by the same member from Niagara
10 Falls -- that we all don't have professors for husbands.
11 Now on page 18 it might be of interest to the members
12 of the Committee, Mr. Chairman, those that are listed
13 under this Table for School Teachers, Managers, Officials,
14 Proprietors and those in the Professional group, just
15 exceed 7% of the 100% involved. And I think this is a
16 point that Mr. Irwin and Mr. White and other members of
17 this Committee perhaps should take into consideration.
18 And I understand that this brief represents 65% of the
19 people in the small loans business at the present time.
20 And if this table is correct and if these people are
21 doing 65% of the business, then those who are borrowing
22 on this basis, shown on page 18 on Table 7, School
23 Teachers, Managers, Officials, Proprietors and Profession-
24 al people, constitute only 7% of the people who are
25 borrowing.

26 MR. BUKATOR: That's because they know
27 the interest rate.

28 MR. REILLY: Yes. So under those
29 circumstances let's give some consideration to the 93%
30 who are borrowing and who want to know the dollar rate

1 rather than the interest rate.

2 MR. BUKATOR: And who are being
3 swindled because they don't know the rate.

4 MR. REILLY: They know the dollar rate
5 here very clearly, Mr. Bukator. It says 24% and in
6 addition to that, if they are not satisfied with 24%, it
7 says it's \$13.54. They have it both ways right in
8 the contract.

9 MR. BUKATOR: You are back to the
10 Small Loans Act now. We were talking about the small
11 consumers who don't buy under this Act.

12 MR. REILLY: You are most vigorous,
13 even when you are wrong.

14 MR. BUKATOR: Yes. (Laughter)

15 MR. LETHERBY: I haven't much to
16 contribute, Mr. Chairman. I think it is an excellent
17 brief. I think these gentlemen are to be commended for
18 the time they have taken. It is very comprehensive.
19 I rather lean to the view than Len does here and we
20 have gone over this many times. In all the organizations
21 that we have had come before us, we have got down to
22 this reveal the interest rate, have some common formula
23 whereby you know the interest can be uniformly shown.
24 But not one of them -- and we have had some very smart
25 financial tycoons here -- could come up with any idea
26 or suggestion how this can be done. For instance, one
27 man, probably not too well educated or supposing he is
28 reasonably well educated. He goes to the bank and he
29 borrows a sum of money and he is being charged 6%. He
30 would go to you boys probably for a loan of, what is it,

1 under \$300? And it's 24%. He's confused right off the
2 bat. He figures, "Why in Sam Hill can't we have an
3 interest rate right across the board that's the same"?
4 He doesn't understand it. My own thinking is, and I
5 lean to Len's here, it would be nice to have a uniform
6 formula and interest rate, but what the man is interested
7 in, as you have just been saying, is the dollar cost.
8 He borrows \$100 and you say here, "We want five dollars
9 in exchange for the use of that money". That's what
10 he is concerned about. He can't figure out an interest
11 rate because we in this Committee can't figure it out.
12 So I am all for the dollar cost. (Laughter).

13 One other item I think Mr. Hendrie
14 mentioned, and that is the central registry. Back
15 in 1954, Mr. Hendrie, this Legislature set up a Select
16 Committee on the subject and I remember I was on that
17 Select Committee. Bob McCowrey was the Chairman and
18 the Honourable () was also on that Committee.
19 And we went out to British Columbia and saw their
20 system and we thought it was very good. We made a very
21 detailed and good report, I thought, -- Bill ()
22 was on that too. And we submitted it to the Legislature
23 and it got pigeoned or buttonholed or something. I
24 don't know where it is. But we felt it was a very good
25 report. And I agree with you, sir, that it is something
26 very badly needed. That's all I have to say.

27 THE CHAIRMAN: Any other questions?

28 MR. REILLY: Not another question,

29 Mr. Chairman, but I do have an observation. On page 19,
30 -- I know it's pretty popular for a politician to refer

1 to these people who are down and out and how we are
2 trying to protect the small salaried earner, but we
3 see that those who are 65 and over represent only 1.01%
4 on the basis of the age of the borrower and that most
5 people who are borrowing on the small loans basis are
6 between age 20 and 45 and only 1% are 65 and over.

7 THE CHAIRMAN: Can you give us any
8 idea of what percentage of borrowers are declined a
9 loan?

10 MR. CAWKER: I think we covered, we
11 made the statement in the brief, Mr. Chairman, that
12 60% -- well, 40% of the loans are declined. I believe
13 one of our larger companies has a slightly different
14 figure in its own operation, which you will probably
15 hear about, but industry-wide we decline about 40% of
16 the applications.

17 THE CHAIRMAN: And where you have
18 a repeat customer, how long might it be before he
19 will come back the second time for a loan?

20 MR. CAWKER: I don't think I could
21 find a yardstick to give you a time, Mr. Chairman.

22 THE CHAIRMAN: Do you think that
23 consumer credit has reached a dangerous level?

24 MR. CAWKER: On the basis of our
25 records and what we see in the field, I can't see that
26 consumer credit per capita has reached a dangerous level.
27 I think our own statistics, between our own statistics
28 and those developed by the Department of Insurance over
29 the years, indicate that the consumer himself is a pretty
30 good judge of whether he should borrow or whether he

1960

1 shouldn't borrow. I know we hear of the occasional
2 unfortunate evidence of bad judgment. I think that is
3 inevitable. But when you consider the amount of
4 consumer credit that is transacted in this country or
5 in the United States or, for that matter, in England,
6 I do still have the greatest of faith in the ability
7 of the Canadian consumer to make a fair projection of his
8 own ability to repay, whether or not he should borrow.
9 And this is rather consistent, although our statistics
10 don't go back that far, during both upswings and down-
11 swings, in the economy.

12 THE CHAIRMAN: Do your member
13 companies ever try to dissuade the potential borrower
14 from making a loan?

15 MR. CAWKER: Yes, sir, yes, sir.

16 THE CHAIRMAN: (Inaudible)

17 MR. CAWKER: Yes, I would say it
18 has been. In my own experience and also in discussions
19 within our Association.

20 THE CHAIRMAN: And could you tell us
21 something about your write-offs, give us an individual
22 case where you might have decided to write off the debt?

23 MR. CAWKER: Would you like to deal
24 with that, Mr. Oakes?

25 MR. OAKES: I can only speak from my
26 own experience as a major company in the industry. We
27 have, this particular company has, hundreds and hundreds
28 of letters on file from welfare agencies where we have
29 discovered a case, possibly an account that is paid right
30 up to date, and you find that there has been some very

1961

1 tragic family misfortune. We are approached by welfare
2 agencies, particularly the Army Benevolent Fund, we
3 enjoy a very good relationship with the Army Benevolent
4 Fund, where they will come to us and ask us either to
5 write-off an account completely or to reduce payments
6 or make some special arrangements in order that they can
7 balance out the family finances. This isn't unusual,
8 today, where families run into problems, even to the
9 extent where they do not come and ask us to cancel
10 the debt, but where we voluntarily have cancelled debts.

11 THE CHAIRMAN: That is where someone
12 has intervened on their behalf?

13 MR. OAKES: Yes, sir. We usually sit
14 down with the welfare worker or Army Benevolent people
15 and try to come up with a solution that will be helpful.

16 MR. CAWKER: Some years ago I might
17 say, Mr. Chairman, the matter of cooperation with, among
18 others, the Army Benevolent Fund was taken up at an
19 annual meeting of our Association and I think it would
20 be fair to say that cooperation by our membership gener-
21 ally, since that time, has been something we can be
22 proud of.

23 THE CHAIRMAN: Gentlemen, are there
24 any further questions?

25 Well then, as we have said before, I
26 think you have done a very excellent job on the pre-
27 paration of this brief and on your presentation today.
28 As Chairman, I think it is along the lines I expected it
29 to be and, I think, along the lines that I tried to
30 explain, when they left, that this was the sort of brief

1962

1 that you were requested to prepare. You have delved
2 into it a little more fully than we expected and I am
3 sure we will find it very helpful. You have been, of
4 course, very cooperative and we appreciate it. Thank
5 you.

6 ---MEETING ADJOURNED UNTIL 10:00 A.M., DECEMBER 3, 1963.
